# ANNUAL REPORT ON BENEFIT YEARS ESTABLISHED AND TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

Calendar Year 1953

This is the final statistical report dealing with benefit years established and benefit years terminated during the calendar year 1953. The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices.

## The Insured Population

The population insured under the Unemployment Insurance Act is constantly changing as persons enter or leave insured employment. The count published in this report is one for a particular point in time, i.e., April 1, 1953. At that time insurance books are renewed by employers for all employees, and data is submitted concerning the age, sex and occupation of those employees having insurance numbers ending in "4". Similar data is acquired from claimants, as their books are renewed when they report to the local office, and also from those who enter insured employment for the first time during April. Comparison of this count of the insured population 3,150,680, with the total number of books issued during the twelve months ending March 31, 1953, about 4,600,000, gives evidence of the extent of movement in and out of insured employment during a year. The number who contribute for a period during the year is some 50 per cent greater than the number contributing or on claim at April 1st.

Since the data is based on a ten percent sample of insurance books, there is likely to be a large sampling error in the smaller categories. For this reason, figures are not shown for groups containing fewer than an estimated 100 persons (10 sample cases).

Data on the insured population provide a base to which the magnitudes contained in the body of the report concerning persons establishing benefit years and benefit years terminated can be related. Table 2 gives a distribution of persons insured at April 1, 1953, by industry, sex and province, and tables 29 and 30 similarly classify benefit years terminated during the year and benefit days paid on these benefit years. Table 1 shows the insured classified by occupation, sex and province; corresponding classification of benefit years terminated and benefit days paid on them is given in Tables 27 and 28. Table 3 classifies the insured by industry, age and sex; the comparable data for benefit years terminated and days paid on them is given in Tables 31 and 32.

However, the incidence of benefit years established, benefit years terminated and benefit days paid, derived from these tables should be used with caution. The occupations and industries shown for the insured population and for persons establishing benefit years are not necessarily their "usual" employment activities. Tables 1, 2 and 3 give data on the occupations and industries in which insured persons were participating at April 1, 1953, and those in the balance of the report show the latest activity in which a person was engaged prior to filing an initial claim for benefit. Therefore the occupation and industry in which a person has built up a contribution history is not necessarily identical with that in which he is included here. However, the general occupational, industrial and age patterns of the insured population, when compared with those of persons establishing benefit years and benefit days paid, reveal significant concentrations that are related to known seasonal shifts in employment.

## Benefit Years Established and Terminated

A benefit year is a device whereby the duration of benefit and daily rate of benefit to which, by his contribution record, a person is entitled, is determined; within these limits he may draw benefit so long as he satisfies the benefit provisions of the Act. A benefit year is established for a claimant if he has sufficient contributions within a two-year period, some of which must be recent contributions, to prove that he has a considerable attachment to insured employment. The rules (called statutory conditions) governing the establishment of a benefit year, in effect in 1953, are as follows:

A person must prove that contributions have been paid in respect of him while employed in insurable employment:

(a) for at least 180 days during the two years immediately preceding the day on which the benefit year commences, and

(b) for at least 60 days during the period of fifty-two weeks, or 45 days during the period of twenty-six weeks, immediately preceding the commencement of the benefit year or since the commencement of the immediately preceding benefit year (if any) whichever period is less.

Whether or not he actually draws benefit is contingent on other conditions. The claimant must prove that he is unemployed, capable of and avail-

able for work and unable to obtain suitable employment, and continues to draw benefit so long as these conditions continue to be fulfilled. An insured person is unemployed within the meaning of the Act if he has become separated from his employment, is on temporary lay-off or on short time. He is not considered unemployed on a day for which a contribution is payable, or one for which he has received payment in lieu of notice. He is not deemed unemployed if, even though separated from his regular employment, he still earns more than \$2.00 a day in subsidiary employment.

In addition, the first five days of unemployment in any benefit year ("waiting days") are not compensated, nor is the first day in any period of unemployment except that only one such day is excluded from benefit in a claim week and the first day of unemployment following a period of employment of not more than three consecutive days is compensated.

An insured person is disqualified from the receipt of benefit if he has lost his employment by reason of his own misconduct, voluntarily leaves his employment without just cause, has failed to accept suitable employment, for a disqualification period not exceeding six weeks. During a period such as illness or vacation, a person may be considered not capable of or not available for employment. However, a person who has become entitled to benefit and afterward, while this entitlement would otherwise continue, becomes incapable of work by reason of illness, injury or quarantine, is not thereby disqualified.

A person cannot receive benefit while he is an inmate of an institution supported wholly or partly out of public funds, or while he is resident outside of Canada (with some exceptions).

The above brief summary of the conditions surrounding the payment of benefit is intended merely as an aid in interpreting the tables in this report and is not exhaustive (the Commission has the power to regulate some aspects of entitlement to benefit, so that the broad rules given here have exceptions). For a complete account of these rules, reference should be made to the Unemployment Insurance Act, 1940 as amended 1953, and the regulations passed by Order-in-Council under that statute.

During the calendar year 1953 (Table 6) there were 881,680 benefit years established by 852,610 persons, 28,806 persons establishing two and 132 persons establishing three benefit years. An average of 147 benefit days was authorized on these benefit years. The number of benefit years terminated during 1953, benefit days paid and amount of benefit paid on them, are classified by sex and province in Table 11. An average of 58 days (males 57, females 60) was paid on these benefit years, at an average daily rate of \$2.99 (males \$3.21, females \$2.15).

Table 4 shows the number of persons issued an unemployment insurance book, April 1, 1949 to 1953, classified by age and sex. The insured population

grew steadily during this period, due in part to increases in coverage, but largely because of higher employment in covered industries.

Table 5 classifies the number of persons establishing benefit years in each of the years 1950-1953 by marital status and sex. Of males reporting their marital status, in 1953, 37% were single and 60% married. The relative importance of married women has been increasing, until in 1953, about 50% of females reporting marital status were married. The proportion of married women differed by province, from 32% for Newfoundland to 65% in Manitoba (Atlantic provinces 46%, Quebec 35, Ontario 59, Prairie provinces 61 and British Columbia 62).

Tables 6 and 7 are historical tables showing the number of benefit years established, persons who established benefit years and benefit days authorized during the calendar years 1949-1953.

Persons who established benefit years during the calendar years 1949-1953 are classified, in Table 8, by sex and province, showing the percentage having a dependent. The percentage of males with a dependent has not varied greatly for Canada, being about 58%. By province, these percentages have ranged from about 73 for Newfoundland, to 55 for Ontario, Manitoba and Alberta. The percentage of females with a dependent is only 7% for Canada, varying from about 12% in Prince Edward Island to 6% for Quebec; Ontario and the Prairie provinces were close to the national average, British Columbia slightly higher, 8%, with the highest percentages prevailing in the Atlantic provinces.

Table 9 shows those who established benefit years in 1953 by age, province and sex. Comparison with Table 4 indicates that the age composition of those establishing benefit years is quite different from that of the insured population. For example, relatively few benefit years are established by those under 20, partly because they are not usually subject to long periods of unemployment but also because the group contains a high proportion of recent entrants to insured employment. At the other extreme, 70 and over, males establishing benefit years represent 46 per cent, and females 45 per cent, of the April insured population in this age group.

A distribution of persons who established benefit years in 1953 by duration of benefit authorized (10-day interval), sex and province is given in Table 10. The number of males in each 10-day group increases to the 60-69 category then steadily decreases to the 230-239 group and rises again gradually to the 300 and over class. Females follow a similar pattern, increasing to 50-59 category, decreasing to the 190-199 and increasing to the 300 and over group. Included among those with only a few days authorized are recent entrants into insured employment, those with a consistent record of claims, and those who work only periodically in insured employment. Greater length of attachment to insured

employment is reflected in a greater number of benefit days authorized, with the highest entitlement, 300 or more days, representing those who have been contributing steadily for about five years.

Table 12 shows benefit years terminated and corresponding days paid classified by dependency status, sex and province. Although there were fewer benefit years terminated by those with a dependent, on the average there were more days paid on these benefit years (with dependent 60 days, without, 56 days). The average is higher for females than males and for those with a dependent than for those without dependent for both sexes.

Tables 14 and 15 provide a classification of benefit years terminated during 1953 and benefit days paid on them by daily rate of benefit, dependency status and province, and Table 13 gives historical data, 1949-1953, for Canada. In each case the dependency status and daily rate are those authorized at the time the benefit year was established. The schedule of rates has changed several times during the five-year period. The maximum daily rate for benefit years terminating in 1953, \$4.00 with dependent and \$2.85 without, is shown here for those benefit years established in July 1952 or later. In 1953, 79% of benefit years terminated for males with a dependent were authorized \$3.50 or more, and for males without dependent, 65% were authorized \$2.50 to \$2.85. A small percentage of women establishing benefit years (7%) have a dependent, therefore the percentages at various rates have little significance; for females without dependent, however, 68% had benefit rates of \$1.80 to \$2.50.

Table 16 shows benefit years terminated and those terminated by exhaustion, and average number of benefit days paid on them, classified by age and sex, for the years 1949-1953.

Benefit years terminated and benefit days paid on them are classified by sex and age group and (1) province (Tables 17 and 18) and (2) cause of termination of the benefit year (Tables 19 and 20). The average number of benefit days paid was 58 (males 57, females 60). Both males and females were paid an average of 46 days benefit on benefit years which lapsed, but on benefit years exhausted males were paid 82 days, females 95. For both males and females, the average number of benefit days paid increased fairly gradually with age, from

age group under 20 (males 41, females 35) to age 55-59 (males 66, females 77) but for the older age groups the averages increased rapidly, until at age 70 and over, males averaged 134 days and females 148.

A distribution of benefit years terminated by number of benefit days paid and sex is given in Table 22 for the years 1949-1953, for Canada, and in Table 23 by province, 1953. Of males, 10.6% drew no benefit, 1953, and this percentage varied from 12.2 in 1950 to 16.1 in 1951. Of females, 16.9% drew no benefit, 1953, and in previous years the percentage was about 12 in 1950 and 16 in 1949, 1951 and 1952. In 1953, of those who drew benefit, about 25% of males and 26% of females drew less than 30 days, and about 76% of males and 70% of females drew less than 85 days.

Table 24 classifies benefit years terminated in 1953 by number of benefit days authorized and each group of days authorized by duration of benefit paid. This table shows the extent to which those who established benefit years actually used their entitlements.

Tables 25 and 26 give a distribution of benefit years terminated and days paid on them by marital status, sex and province, and Table 21 classifies benefit years terminated by duration of benefit days paid, marital status and sex. For all three years, 1951-1953, females, all status groups, were paid on the average more than males. This is largely due to the fact that married females drew more days on the average than married males (1953-females 68, males 59). In 1953, of males, about 10% of single status and 11% of married, drew no benefit. An additional 54% of single, and 48% of married, males, drew fewer than 60 days benefit. About 18% of single females and 17% of married, drew no benefit, and another 53% of single females, and 39% of married were paid less than 60 days.

Tables 27-32 show benefit years terminated during 1953 and corresponding benefit days paid classified by occupation and industry. As mentioned above with regard to Tables 1 to 3, the occupation and industry shown for each claimant refer to his most recent job at the time the initial claim is filed. It is not known to what extent the past contributions used in determining his benefit entitlement were paid while in that job.

TABLE 1. Number of Persons Issued an Unemployment Insurance Book, April 1, 1953,  
Classified by Occupation, Sex and Province

1. The claimants for whom an occupation was specified have been included in the appropriate occupation group. Thus the total claimants as given in this table is less than that in the industry table by 211,660.

\* Indicates less than an estimated 100 persons.

— Indicates no one reported in the category.

In this and subsequent tables, Yukon is included with British Columbia and the Northwest Territories with Alberta.

**TABLE 2. Number of Persons Issued an Unemployment Insurance Book, April 1, 1953,  
Classified by Industry, Sex and Province**

## APPENDIX

### BENEFIT RIGHTS ESTABLISHED UNDER THE SUPPLEMENTARY BENEFIT PROVISIONS OF THE UNEMPLOYMENT INSURANCE ACT.

The supplementary benefit provisions of the Unemployment Insurance Act provide for specified benefit rights, to certain classes of claimants unable to satisfy the minimum contribution requirements for regular benefit, during the winter months. The plan came into operation through an amendment to the Unemployment Insurance Act in February 1950. This report provides statistical material on cases of benefit entitlement and benefit days paid during the period, January 1 — April 15, 1953.

Supplementary benefit is made available during the operative period to the following four classes of claimants, provided they meet all the requirements necessary for the payment of regular benefit except that the contribution requirements are relaxed as specified in each case:

**Class 1** — A person whose benefit year has terminated since the 31st day of March immediately preceding the day on which he makes a claim for supplementary benefit.

**Class 2** — A person who failed to fulfill the statutory conditions on a claim filed since the preceding 31st day of March if contributions were paid in respect of him for not less than 90 days since that date.

**Class 3** — A person who was employed in lumbering and logging other than in the province of British Columbia, or in lumbering and logging (except in British Columbia) and any insurable employment for not less than 90 days in any consecutive twelve-month period within the eighteen months preceding the date on which he makes a claim for supplementary benefit. This Class has been inoperative since 1951.

**Class 4** — A person who, for not less than 90 days subsequent to the preceding 31st day of March, was employed in an employment which was made insurable in the year preceding the date of claim, or in employment that became insurable in that year and any other insurable employment. This Class was inoperative in 1952 and 1953.

The number of benefit days authorized is calculated as follows:

**Class 1** — The same number of days to which he was entitled on his most recently established benefit year.

**Class 2** — One-fifth of the number of days for which he has made contribution since the immediately preceding March 31st.

**Class 3** — One-fifth of the number of days for which he was employed in lumbering and logging and in any insurable employment during the specified twelve-month period.

**Class 4** — One-fifth of the number of days for which he was employed in employment that was made insurable and in other insurable employment, since the immediately preceding March 31st.

The daily rate of supplementary benefit is approximately 80 per cent of the regular benefit rate and is calculated on the same basis.

In 1953, supplementary benefit was payable during the period January 1 to April 15 (a maximum entitlement of 90 days). In no case, however, does the benefit authorization exceed the number of benefit days between the date of the claim and April 15th. Any day of proven unemployment within the thirty days immediately preceding the supplementary benefit period may be substituted for any of the "waiting days" required under the Act.

Moneys were provided by Parliament to reimburse the Unemployment Insurance Fund for benefit payments made to Class 3, and continue to be provided for payments to Class 4 whenever it is operative. Provision is also made for Parliament to vote money to reimburse the Fund for any excess in benefit payments to Classes 1 and 2 over revenue from the additional contributions of employers, employees and the Government which was levied for the purpose of paying supplementary benefit to these classes. (The amendment of February 1950 provided for an additional 1 cent each on the daily contributions of employers and employees, to which the Government adds one-fifth in accordance with the contribution provisions of the Act).

# ANNUAL REPORT ON BENEFIT YEARS ESTABLISHED AND TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

Calendar Year 1954

This is the final statistical report dealing with benefit years established and benefit years terminated during the calendar year 1954. The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices.

## The Insured Population

The size and composition of the population insured under the Unemployment Insurance Act are constantly changing as persons enter and leave insured employment, seasonally and otherwise. At the time of the renewal of insurance books, April 1st, books and contribution cards are renewed through employers for those employed in insured employment at that date and for claimants on their first visit to a local office after April 1st. These together with those who enter insured employment for the first time during April, constitute the count of the insured population as presented in this report. Using these data as a base, estimates are prepared of the numbers insured at the beginning of each month. During the calendar year 1954, the average of these estimates of the actively insured was 3,246,000, ranging from 3,194,000 at June 1st to 3,310,000 at December 1st.

Since the data is based on a ten per cent sample of insurance books, there is likely to be a large sampling error in the smaller categories. For this reason, figures are not shown for groups containing fewer than an estimated 100 persons (10 sample cases).

Data on the insured population provide a base to which the magnitudes contained in the body of the report concerning persons establishing benefit years and benefit years terminated can be related. Table 1 classifies insured persons by occupation, sex and province and Tables 27 and 28 similarly classify benefit years terminated and the benefit days paid on them. The industry, sex and province are given, of insured persons in Table 2, and of benefit years terminated and days paid in Tables 29 and 30. Table 3 gives a distribution of the insured by industry, age and sex, and Tables 31 and 32 show a similar breakdown for benefit years terminated and corresponding days paid.

However, the incidence of benefit years established, benefit years terminated and benefit days paid, derived from these tables should be used with caution. The occupations and industries shown for the insured population and for persons establishing

benefit years are not necessarily their "usual" employment activities. Tables 1, 2 and 3 give data on the occupations and industries in which insured persons were participating at April 1, 1954, and those in the balance of the report show the latest activity in which a person was engaged prior to filing an initial claim for benefit. Therefore the occupation and industry in which a person has built up a contribution history is not necessarily identical with that in which he is included here. However, the general occupational, industrial and age patterns of the insured population, when compared with those of persons establishing benefit years and benefit days paid, reveal significant concentrations that are related to known seasonal shifts in employment.

Table 4 shows the number of persons issued an unemployment insurance book, April 1, 1950 to 1954, classified by age and sex. For both males and females, the percentage in the age group 25-64 has been very gradually increasing and that in the under 25 group decreasing over the period. The insured population as a whole has been increasing, largely due to higher employment in covered industries.

## Benefit Years Established and Terminated

A benefit year is a device whereby the duration of benefit and daily rate of benefit to which, by his contribution record, a person is entitled, is determined; within these limits he may draw benefit so long as he satisfies the benefit provisions of the Act. A benefit year is established for a claimant if he has sufficient contributions within a two-year period, some of which must be recent contributions, to prove that he has a considerable attachment to insured employment. The rules (called statutory conditions) governing the establishment of a benefit year, in effect in 1954, are as follows:

A person must prove that contributions have been paid in respect of him while employed in insurable employment:

(a) for at least 180 days during the two years immediately preceding the day on which the benefit year commences, and

(b) for at least 60 days during the period of fifty-two weeks, or 45 days during the period of twenty-six weeks, immediately preceding the commencement of the benefit year or since the commencement of the immediately preceding benefit year (if any) whichever period is less.

Whether or not he actually draws benefit is contingent on other conditions. The claimant must prove that he is unemployed, capable of and available for work and unable to obtain suitable employment, and continues to draw benefit so long as these conditions continue to be fulfilled. An insured person's unemployed within the meaning of the Act if he has become separated from his employment, is on temporary lay-off or on short time. He is not considered unemployed on a day for which a contribution is payable, or one for which he has received payment in lieu of notice. He is not deemed unemployed if, even though separated from his regular employment, he still earns more than \$2.00 a day in subsidiary employment.

In addition, the first five days of unemployment in any benefit year ("waiting days") are not compensated, nor is the first day in any period of unemployment except that only one such day is excluded from benefit in a claim week and the first day of unemployment following a period of employment of not more than three consecutive days is compensated.

An insured person is disqualified from the receipt of benefit if he has lost his employment by reason of his own misconduct, voluntarily leaves his employment without just cause, has failed to accept suitable employment, for a disqualification period not exceeding six weeks. During a period such as illness or vacation, a person may be considered not capable of or not available for employment. However, a person who has become entitled to benefit and afterward, while this entitlement would otherwise continue, becomes incapable of work by reason of illness, injury or quarantine, is not thereby disqualified.

A person cannot receive benefit while he is an inmate of an institution supported wholly or partly out of public funds, or while he is resident outside of Canada (with some exceptions).

The above brief summary of the conditions surrounding the payment of benefit is intended merely as an aid in interpreting the tables in this report and is not exhaustive (the Commission has the power to regulate some aspects of entitlement to benefit, so that the broad rules given here have exceptions). For a complete account of these rules, reference should be made to the Unemployment Insurance Act, 1940 as amended 1953, and the regulations passed by Order-in-Council under that statute.

The number of persons establishing benefit years during the calendar years 1950-1954 are classified by sex and marital status in Table 5. The ratio of married males to single has varied little over the period, but the proportion of married females has been increasing. In 1954, nearly 52% of females whose marital status was specified were married. This percentage differed by province, being higher in Ontario and the western provinces, and varying from 34% in Newfoundland to 64% in Manitoba.

Table 6 gives historical data on benefit years established, and persons establishing benefit years according to the number of benefit years established. The percentage of those who establish more than one benefit year during a calendar year, although small, has been very gradually increasing (1950: males 1.7, females 1.3; 1954: males 3.7, females 2.3). A comparison with Table 4 shows that for the years 1950-1954 an average of about 25% of the total insured (at April 1st) established benefit years, varying from 20% in 1951 to 30% in 1954.

Table 7 shows the number of benefit days authorized on benefit years established during the calendar years 1950-1954. For the whole period the average number of benefit days authorized was 153 (males 152, females 155); for 1954 the average was 152 (males 152, females 151).

Table 8 shows the number of persons establishing benefit years and the percentage of these having a dependent. The percentage of males with dependent has been about 59% throughout the period for Canada. The percentages have varied by province; Newfoundland being highest with about 74%, Nova Scotia, New Brunswick and Prince Edward Island having 68, 67 and 64% respectively, with the other provinces slightly below the average, around 57%. The percentage of females with dependent is much lower, having been about 7% for Canada, and ranging from 13% for Newfoundland, to 6% for Quebec.

Table 9 gives a distribution of persons establishing benefit years during the calendar year 1954, classified by age, sex and province. Comparison with Table 4 shows the age composition of persons establishing benefit years to be quite different from that of the insured population. Among insured persons in the youngest age group (under 20) there are relatively few claimants, largely because this group contains a high proportion of new entrants to insured employment, and also because these young persons are not subject to long periods of unemployment. On the other hand, 51% of the males 70 and over in the insured population established benefit years, as did 37% of females in this age group. For both males and females in age groups 20 to 64, the percentages of the insured population establishing benefit years do not vary greatly at different ages although the percentage is consistently higher for males.

Table 10 classifies persons establishing benefit years in 1954 by duration of benefit authorized, sex and province. The distribution for males shows that the numbers in each group increase from the 30-39 to 70-79 day group, decrease gradually to the 220-229 day group, then increase again to the 300 and over category. For females, the numbers decrease steadily from the 40-49 to 200-209 day group, and then rise gradually. Included among those with only a few days authorized are recent entrants to insured employment, those with a consistent record of claims, and those who work only periodically in insured employment. Greater length of attachment to in-

sured employment is reflected in a greater benefit entitlement, with 300 or more days being authorized for those who have been contributing steadily for about five years.

Table 11 shows the number of benefit years terminated during 1954, and the days paid and amount of benefit paid on these benefit years. An average of 68 days was paid (males 68, females 69) at an average daily rate of \$3.11 (males \$3.34, females \$2.26).

Table 12 classifies benefit years terminated during 1954, and benefit days paid on them, by province, sex and dependency status. For both males and females, those with a dependent drew, on the average, more days than those without dependent, with females averaging slightly more than males.

Table 13 shows, for the years 1950-1954, the number of benefit years terminated and benefit days paid on them by sex, dependency status and daily rate of benefit authorized; Tables 14 and 15 similarly classify 1954 data, showing province. The daily rate of benefit has changed several times during the period covered, and following each revision the majority of male claimants have fallen into the highest category. In 1954, of males with a dependent, 71% were authorized \$4.00 a day and another 25% were authorized \$3.50. Of males without dependent, 86% were authorized \$2.50 or more. A much lower proportion of females were authorized the highest rates of benefit. Of females, only 8% had a dependent, therefore the percentages at various rates for this group has little significance; those without dependent were congregated in the \$1.90-\$2.79 groups (58%) with another 20% in the \$1.60-\$1.89 group.

In Table 16 the number of benefit years terminated and those terminated by exhaustion, together with the average number of benefit days paid on them, are classified by age and sex. For both males and females the average number of benefit days paid increased fairly gradually by age up to age 59, for each year of the period. For the older age groups the averages increased rapidly; in 1954, males 70 and over averaged 134 days benefit, and females 70 and over 154 days. In each year, 1950-1954, for both males and females a relatively high percentage (usually about 50 percent) of those under 20 years of age exhaust their benefit; however the average number of benefit days paid in respect of this group are relatively few because of low entitlement. For both sexes 20 years of age and over the percentage exhausting benefits gradually increases with age, although not in general approaching the level for the under 20 group until age 65 and over.

Benefit years terminated during 1954, and benefit days paid on them, are classified by age group and sex: by province in Tables 17 and 18; and by cause of termination of the benefit year, in Tables 19 and 20. The average number of benefit days paid on

benefit years exhausted (males 90, females 99) was considerably higher than that paid on benefit years which lapsed (males 55, females 51). For benefit years terminating by exhaustion, the average number of benefit days paid to females in each age group was higher than that for males; this relationship does not exist for benefit years which lapsed.

Table 21 distributes benefit years terminated during 1954 by number of benefit days paid, sex and marital status. About 6% of single males, and 7% of married, drew no benefit, and another 8% of single and 11% of married males drew less than 15 days. Some 60% of single males drew 1 to 74 days, and about the same proportion of married drew less than 80 days. For females, 12% of single and 14% of married, drew no benefit; an additional 14% single and 7% married females drew less than 15 days. Of single females, about 60% drew from 1 to 74 days, and the same proportion of married females drew 1 to 104 days. Those drawing 215 or more days represent 1% of single males, 3% of married, and 3% of single females, 6% of married.

A distribution of benefit years terminated classified by duration of benefit payment and sex is given for: 1950-1954 in Table 22; 1954, by province, Table 23. Of benefit years terminated in 1954, 6% of males drew no benefit, as compared with 11% in 1953 and 13% in 1952; 13% of females drew no benefit in 1954, 17% in 1953 and 16% in 1952. Of those drawing benefit on benefit years terminated, 96% of males drew less than 215 days in 1950 as did 97% in 1951-1954; less than 215 days were paid to 93% of females in 1950, over 95% in 1951-1953, and 94% in 1954.

Table 24 classifies benefit years terminated in 1954 by number of benefit days authorized and each group of days authorized distributed according to number of benefit days paid. The diagonal line of figures contains, generally, cases in which benefit was exhausted, and to the left are those cases on which smaller proportions of days authorized were actually paid. The extent to which benefit days authorized were actually used is shown by the distribution along each horizontal line.

Tables 25 and 26 show benefit years terminated during the years 1951-1954, benefit days paid and average benefit days paid on them, classified by marital status and sex. The average number of benefit days paid to females (all status groups) was higher than for males, for each year, largely because, on the average, married females drew more benefit than married males (1954-females 76, males 70).

Tables 27-32 classify benefit years terminated in 1954, and benefit days paid on them, by occupation and industry. The occupation and industry shown for a claimant refer to his most recent job at the time the initial claim was filed. It is not known to what extent the past contributions used in determining his benefit entitlement were paid while in that job.

1. The claimants for whom an occupation was specified have been included in the appropriate occupation group. Thus the total claimants as given in this table is less than that in the industry table by 313,050.

\* Indicates less than an estimated 100 persons.

— Indicates no one reported in the category.

In this and subsequent tables, Yukon is included with British Columbia and the Northwest Territories with Alberta.

## APPENDIX

### BENEFIT RIGHTS ESTABLISHED UNDER THE SUPPLEMENTARY BENEFIT PROVISIONS OF THE UNEMPLOYMENT INSURANCE ACT.

The supplementary benefit provisions of the Unemployment Insurance Act provide for specified benefit rights, to certain classes of claimants unable to satisfy the minimum contribution requirements for regular benefit, during the winter months. The plan came into operation through an amendment to the Unemployment Insurance Act in February 1950. This report provides statistical material on cases of benefit entitlement and benefit days paid during the period, January 1—April 15, 1954.

Supplementary benefit is made available during the operative period to the following four classes of claimants, provided they meet all the requirements necessary for the payment of regular benefit except that the contribution requirements are relaxed as specified in each case:

**Class 1** — A person whose benefit year has terminated since the 31st day of March immediately preceding the day on which he makes a claim for supplementary benefit.

**Class 2** — A person who failed to fulfill the statutory conditions on a claim filed since the preceding 31st day of March if contributions were paid in respect of him for not less than 90 days since that date.

**Class 3** — A person who was employed in lumbering and logging other than in the province of British Columbia, or in lumbering and logging (except in British Columbia) and any insurable employment for not less than 90 days in any consecutive twelve-month period within the eighteen months preceding the date on which he makes a claim for supplementary benefit. This Class has been inoperative since 1951.

**Class 4** — A person who, for not less than 90 days subsequent to the preceding 31st day of March, was employed in an employment which was made insurable in the year preceding the date of claim, or in employment that became insurable in that year and any other insurable employment. This Class was inoperative, 1952 to 1954.

The number of benefit days authorized is calculated as follows:

**Class 1** — The same number of days to which he was entitled on his most recently established benefit year.

**Class 2** — One-fifth of the number of days for which he has made contribution since the immediately preceding March 31st.

**Class 3** — One-fifth of the number of days for which he was employed in lumbering and logging and in any insurable employment during the specified twelve-month period.

**Class 4** — One-fifth of the number of days for which he was employed in employment that was made insurable and in other insurable employment, since the immediately preceding March 31st.

The daily rate of supplementary benefit is approximately 80 per cent of the regular benefit rate and is calculated on the same basis.

In 1954, supplementary benefit was payable during the period January 1 to April 15 (a maximum entitlement of 90 days). In no case, however, does the benefit authorization exceed the number of benefit days between the date of the claim and April 15th. Any day of proven unemployment within the thirty days immediately preceding the supplementary benefit period may be substituted for any of the "waiting days" required under the Act.

Moneys were provided by Parliament to reimburse the Unemployment Insurance Fund for benefit payments made to Class 3, and continue to be provided for payments to Class 4 whenever it is operative. Provision is also made for Parliament to vote money to reimburse the Fund for any excess in benefit payments to Classes 1 and 2 over revenue from the additional contributions of employers, employees and the Government which was levied for the purpose of paying supplementary benefit to these classes. (The amendment of February 1950 provided for an additional 1 cent each on the daily contributions of employers and employees, to which the Government adds one-fifth in accordance with the contribution provisions of the Act).

**TABLE A1. Number of Persons Establishing Benefit Rights and Number of Benefit Days Paid under Supplementary Benefit Provisions of the Unemployment Insurance Act, Calendar Years<sup>1</sup> 1950-1954, Classified by Class and Sex**

Class and Sex	Persons Establishing Benefit Rights					Average Benefit Days Paid <sup>2</sup>					Number of Benefit Days Paid

# ANNUAL REPORT ON BENEFIT YEARS ESTABLISHED AND TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

Calendar Year 1955

This is the fourteenth annual report on unemployment insurance benefit for Canada. The report is designed to provide information not only on the amount of benefit paid and the number of persons receiving benefit but also to indicate the personal and economic characteristics of insured workers and

those insured unemployed workers establishing benefit periods. In addition the report indicates the attachment of the insured unemployed workers to prior insurable employment. The basic material was supplied by the Unemployment Insurance Commission.

## The Insured Population

### Insurable employment

All persons employed in Canada in wage earning employment under a contract of service are insurable unless specifically excepted. Exceptions broadly include those employed in agriculture, fishing, hunting, and trapping; private domestic service, hospitals or charitable institutions not carried on for gain; private duty nurses, teachers, members of the armed forces; permanent employees of federal or provincial governments, and provincial government service unless insured under arrangements with individual provinces; those paid on other than an hourly, daily or piece rate and earning more than \$4,800 a year.

### Number of persons insured

The size and composition of the population insured is constantly changing as persons enter and

leave insurable employment. At the time of the renewal of insurance books (April 1st from 1943 to 1954, and June 1st in 1955), contribution records are renewed through employers for those employed in insured employment at the date and for claimants on their first report to a local office after June 1st. These, together with those who enter employment for the first time during June, constitute the count of the insured population presented in this report. Using this as a base, estimates are prepared of the number insured at the beginning of each month. During the calendar year 1955, the estimate of the insured population ranged from some 3,257,000 at June 1st to 3,517,000 at December 1st. It is estimated that about 60 per cent of the total civilian labour force and 80 per cent of wage-earners are covered by unemployment insurance.

## Regular Unemployment Benefit

### Definition of benefit period

When the insured unemployed worker makes his first claim, he begins or establishes a "benefit period" if he has enough contributions and satisfies the qualifying conditions. A benefit period runs for 52 weeks beginning with, and including, the week in which he established the benefit period, or until he uses up all his benefit if he does this in less than 52 weeks. If he makes a claim or claims during another period of unemployment while his benefit period is still in force, he does not have to fulfill the conditions governing the establishment again. If he has no more benefit to his credit, he must again show that he has the contributions required before a new benefit period can be established.

Coincident with the establishment of the benefit period, the claimant's weekly benefit rate and the total entitlement due him on his benefit period are calculated.

### Requirements for benefit

The Unemployment Insurance Act of 1940 was revised during 1955 and effective October 2nd certain changes were made in adjusting contributions and benefit, and in changing contributions and benefit from a daily basis to a weekly basis. The insured unemployed worker having made a claim for benefit had to prove he was unemployed each day under the old Act and each week under the revised Act for which he claimed benefit, that he was able to work

and available for work, and that he could not find a suitable job.

Under the old Act he had to satisfy the following conditions:

- (1) He must have at least 180 daily contributions in the two years preceding the day he made his claim.
- (2) At least 60 of these daily contributions must have been made during the period of 52 weeks, or 45 of these daily contributions during the period of 26 weeks immediately preceding the start of his benefit period or since the start of his most recent benefit period, if any, whichever period is less.

Under the revised Act he had to satisfy these conditions:

- (1) He must have at least 30 weekly contributions in the two years immediately preceding the week in which he made his claim and 8 of these weekly contributions must have been in the last 52 weeks or since the start of his last regular benefit period, whichever is shorter.
- (2) If this was a subsequent benefit period, however, any of his contribution weeks falling within the two years immediately preceding his most recent benefit period, **regular or seasonal**, and now more than 52 weeks old could not be counted as one of the 30 contribution weeks required to establish his subsequent benefit period.

The revised Act contains certain provisions for the continuance of claims that had their origin under the 1940 Act and for the preservation of the insured worker's rights; e.g., a benefit period in existence on October 2nd continued in force with some modifications; and a claimant's first benefit period that became exhausted, if established within three years of the coming into force of the 1955 Act, could be extended on the basis of credit acquired under the 1940 Act.

Whether or not the claimant actually draws benefit is contingent on certain conditions. The Act is specific with regard to certain circumstances under which a claimant is disqualified from benefit. Proof

of unemployment, capacity and availability for work have been mentioned. A claimant is disqualified for such reasons as unemployment not proved, not capable of work, not available for work, loss of work due to a labour dispute, neglect of offer of work, failure to carry out written direction, non-attendance at a course of instruction, employment lost by his own misconduct, voluntarily leaving without just cause, inmate of a prison, being a resident outside of Canada, failure to lodge his insurance book, seasonal employment, misrepresentation, and so on.

#### Contribution and benefit rates

Under the old Act the contribution and benefit rates were as follows:

Weekly Earnings	Contributions		Rate of Regular Benefit			
	Daily	Weekly	Person with dependent		Person without dependent	
			Daily	Weekly	Daily	Weekly
\$	\$	\$	\$	\$	\$	\$
Under 9.00 .....	.03	.18	.80	4.80	.70	4.20
9.00-14.99 .....	.04	.24	1.25	7.50	1.00	6.00
15.00-20.99 .....	.05	.30	2.00	12.00	1.45	8.70
21.00-26.99 .....	.06	.36	2.50	15.00	1.80	10.80
27.00-33.99 .....	.07	.42	3.00	18.00	2.15	12.90
34.00-47.99 .....	.08	.48	3.50	21.00	2.50	15.00
48.00 and over .....	.09	.54	4.00	24.00	2.85	17.10

The rate of benefit paid the claimant was based under the old Act on the average rate of the last 180 daily contributions he made in the two years immediately preceding his claim.

Under the revised Act the contribution and benefit rates are:

Contribution Rates			
Weekly Earnings	Weekly Contributions	Weekly Earnings	Weekly Contributions
\$	\$	\$	\$
Under 9.00 .....	.08	33.00-38.99 .....	.42
9.00-14.99 .....	.16	39.00-44.99 .....	.48
15.00-20.99 .....	.24	45.00-50.99 .....	.52
21.00-26.99 .....	.30	51.00-56.99 .....	.56
27.00-32.99 .....	.36	57.00 and over .....	.60

Benefit Rates			
Weekly Contributions	Rate of Regular Benefit		Allowable Earnings
	Person with dependent	Person without dependent	
\$	\$	\$	\$
Under .20 .....	8.00	6.00	2.00
.20-.26 .....	12.00	9.00	3.00
.27-.32 .....	15.00	11.00	4.00
.33-.38 .....	18.00	13.00	5.00
.39-.44 .....	21.00	15.00	6.00
.45-.49 .....	24.00	17.00	7.00
.50-.53 .....	26.00	19.00	9.00
.54-.57 .....	28.00	21.00	11.00
.58-.60 .....	30.00	23.00	13.00

The rate of benefit paid the claimant under the revised Act is based on the average rate of the last

30 weekly contributions he makes in the two years immediately before his claim is made.

### Duration of benefit

Under the old Act the claimant on his first benefit period could receive one day's benefit for every five daily contributions made during the previous five year period. After the first benefit period his benefit days were reckoned in the same way, but the total was reduced by one-third of the number of days for which he received benefit in the three years before he made his claim. The minimum and maximum benefit duration was 36 days and 312 days respectively.

Cases did occur where the consideration of benefit days paid within the three years interval before a subsequent benefit period resulted in fewer than 36 days.

The revised Act specifies one week of full benefit for every two weekly contributions made in the last two years subject to a minimum of 15 weeks and a maximum of 36 weeks, except where extended on the basis of credits acquired under the 1940 Act by the transitional sections of the 1955 Act.

### Supplementary Unemployment Benefit

#### Supplementary benefit period

Supplementary benefit was payable in 1955 for unemployment occurring between January 1st and April 15th. The number of days paid would depend on the claimant's contribution and work history. If the insured unemployed worker could not qualify for regular benefit, he could receive supplementary unemployment benefit where he was able to prove that he came within one of the following two classes:

- Class 1—if his previous regular benefit period had ended since the preceding March 31st; or
- Class 2—if he had at least 90 daily contributions since the preceding March 31st.

#### Contribution and benefit rates

Effective January 10, 1955 the supplementary benefit rates were increased to the rates for regular

benefit. Prior to January 10th the rates were 80 per cent of the regular benefit rates.

#### Duration of supplementary benefit

Supplementary benefit in 1955 could be paid for one period of entitlement only for a minimum duration of 60 days, except for claims established after January 29th when the minimum duration of 60 days was progressively reduced by the time elapsing between establishment and April 15th. Alternatively the number of days could be credited as follows, whichever was the greater, namely:

Class 1—for a person in this class, the same number of days to which he was entitled in his most recent benefit period;

Class 2—for a person in this class, one-fifth of the number of days for which contributions were paid since March 31, 1954.

### Comment on Tables

#### Tables I to VI

These tables present percentage distributions of the insured population, regular and supplementary benefit data. Their purpose is to provide some perspective on the relative importance of various groupings of workers to unemployment insurance coverage and benefit.

#### Tables 1 to 4

Data on the insured population provide a base to which the information on regular and supplementary benefit can be related. Thus, Table 1 is a three-way classification of insured persons by sex, province and occupation. Table 17 has a similar classification of all benefit periods terminated during 1955, while Tables 21 and 22 classify in the same way benefit periods terminated in the first 9 months of 1955, before the Act was revised, and benefit days paid on them.

Another three-way classification of insured persons by sex, province, and industry is given in Table 2. Table 19 has the same classification of all benefit periods terminated in 1955, while Tables 23 and 24 classify similarly benefit periods terminated under the old Act in 1955 and benefit days paid on them.

Table 3 gives a distribution of the insured by sex, industry and age. Table 20 has the same breakdown for all benefit periods terminated in 1955, while Tables 25 and 26 show this again for benefit periods terminated under the old Act in 1955 and benefit days paid on them.

However, anyone who is interested in studying the incidence of benefit periods established and terminated and benefit days paid on the latter by relating these statistics to the number of insured persons in various groupings should use the data with caution. The occupation and industry shown for the insured person and for the person establishing a benefit period is not necessarily his usual employment activity. Tables 1 to 3 give data on the occupation and industry in which the insured person was participating at June 1st, 1955, and those in the balance of this report show the latest activity in which the person was engaged prior to filing an initial claim for benefit.

Table 4 shows the number of persons issued an unemployment insurance book April 1st, 1951 to 1954 and June 1st, 1955, classified by sex and age. This table indicates in which age groups changes in the number insured have occurred in this five year period.

### Tables 5 to 33

The data in Tables 5 to 10 are concerned with persons establishing benefit periods (849,368 in 1955), benefit periods established (862,368 or about 1,016 per 1,000 persons) and benefit weeks authorized. The data on benefit periods started during 1955 are more current, of course, than data on terminations because some of the latter would have been started in 1954.

The data in Tables 11 to 33 are concerned with benefit periods terminated during 1955, the average and total amount of benefit paid in 1955 on these benefit periods; benefit periods terminated and benefit days paid on these before the Act was revised; and benefit periods terminated after the Act was revised, benefit weeks and amount of benefit paid on these. Benefit weeks paid on benefit periods terminating in the last three months of 1955 are broken down into complete and partial weeks. The latter are weeks in which the amount of benefit received is less than the claimant's maximum weekly benefit rate.

Some generalizations that can be made from these tables and from the summary percentage distributions are:

1. Women represented 26.0 per cent of the insured population, 22.4 per cent of those starting regular benefit, and 21.2 per cent of regular benefit periods completed.
2. Married persons accounted for 59.8 per cent of those establishing regular benefit and 59.3 per cent of regular benefit periods terminated.
3. Ontario and Quebec accounted for 68.9 per cent of insured workers, 65.3 per cent of those starting regular benefit, 65.9 per cent of regular benefit periods completed and of benefit paid on these.
4. Persons 40 years of age and older represented 35.5 per cent of insured workers, 35.9 per cent of those establishing regular benefit and 38.0 per cent of regular benefit periods terminated.
5. Only 3.8 per cent of regular benefit periods completed by men were classified to clerical workers but 21.5 per cent of benefit periods

completed by women were in this occupation group.

6. Manufacturing accounted for 37.2 per cent of regular benefit periods terminated. About one-third of benefit periods completed by men and about one-half the benefit periods terminated by women were in this industrial group.
7. While 58.7 per cent of men establishing regular benefit periods had a dependent, only 7.0 per cent of women reported a dependent.
8. Some 8.3 per cent of benefit periods terminated with no benefit paid. While 42.2 per cent of regular benefit periods terminating had benefit authorized of \$500 or more, only 8.7 per cent drew benefit to this extent.

### Tables 34 to 44

The data in these 11 tables are concerned with persons establishing supplementary benefit rights, average and total benefit days paid, and amount of benefit paid.

Several generalizations are possible:

1. Women, representing 26.0 per cent of insured workers, accounted for 20.7 per cent of persons establishing supplementary benefit rights.
2. Married persons accounted for 55.0 per cent of those establishing supplementary benefit.
3. Ontario and Quebec, accounting for 68.9 per cent of insured workers, accounted for 61.5 per cent of those establishing supplementary benefit and 60.8 per cent of supplementary benefit paid.
4. Persons 40 years of age and over, representing 35.5 per cent of insured workers, accounted for 39.1 per cent of those establishing supplementary benefit.
5. The amount of supplementary benefit paid was almost \$29 million. The amount of benefit paid on regular benefit periods completed in the calendar year was some \$213 million, or over seven times the supplementary benefit paid.

1. The claimants for whom an occupation was specified have been included in the appropriate occupation group. Thus the total claimants as given in this table is less than that in the industry table by 119,740.

\* Indicates less than an estimated 100 persons.

— Indicates no one reported in the category.

In this and subsequent tables, Yukon is included with British Columbia and the Northwest Territories with Alberta.

ANNUAL REPORT ON BENEFIT PERIODS  
ESTABLISHED AND TERMINATED UNDER THE  
UNEMPLOYMENT INSURANCE ACT

Calendar Year 1956

(Compiled from material supplied by the Unemployment Insurance Commission)

*Published by Authority of*

The Honourable Gordon Churchill, Minister of Trade and Commerce

## FOREWORD

The present Report covers the first complete calendar year under the Unemployment Insurance Act, subsequent to the general revisions of October 2nd, 1955. More space is taken in reporting insurance coverage and benefit for 1956 than in previous years for several reasons.

Information was secured for the first time during the renewal of insurance books in 1956 on the marital status of persons covered by insurance, and is shown in this publication. In addition, the distribution of additional credits authorized by Section 121 of the revised Act is presented. Further, new information on the industry and occupation attachment of seasonal benefit claimants is reported.

Other reasons for an expanded publication include the design of tables to permit comparisons with previous years, the inclusion of summary tables and figures and Unemployment Insurance Commission schedules, and the requirement of reporting benefit duration in complete and partial weeks (two figures) under the 1955 Act, rather than in days (one figure) under the 1940 Act.

# ANNUAL REPORT ON BENEFIT PERIODS ESTABLISHED AND TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

Calendar Year 1956

This is the fifteenth annual report on unemployment insurance benefit for Canada. The report is designed to provide comprehensive and detailed information on the personal and economic characteristics of the insured unemployed on benefit. Data is shown for all persons covered by insurance on the insured's sex, province, age, marital status, occupation and industry. For the person starting benefit additional data is shown on whether he has a dependent, his authorized weekly benefit and his authorized duration of benefit. In addition, for the

person completing benefit data is given on whether benefit rights have been exhausted, and on duration and amount of benefit actually paid. The basic information was supplied by the Unemployment Insurance Commission for persons covered by insurance on U.I.C. Form 409 R (Employee's Registration), for persons starting benefit periods on U.I.C. Form 417 (Computation of Benefit), and for persons completing benefit periods on U.I.C. Form 485 (Unemployment Register).

## The Insured Population

### Insurable employment

All persons employed in Canada in wage earning employment under a contract of service were insurable in 1956 unless specifically excepted. Exceptions broadly included those employed in agriculture; fishing, hunting and trapping; private domestic service; medical, nursing, technical and domestic staff in hospitals or charitable institutions not carried on for gain; private duty nursing; teaching; professional sport; members of the armed forces; police forces, unless insured under arrangements with the municipalities and provinces; permanent employment with the federal government or a municipal authority, except in municipal public utilities and designated federal crown corporations; employment in provincial public service, unless insured under arrangements with the individual provinces; employment paid by commission, such as insurance, real estate and securities salesmen; those paid on other than an hourly, daily or piece rate and earning more than \$4,800 a year, unless election is made to continue insurance.

Section 29 of the Act was amended effective September 30, 1956 to extend insurance coverage to any person engaged in fishing notwithstanding that such a person was not an employee of any other person, and to include as an employer of the fisherman any person with whom the fishermen entered into contractual or other commercial relationships in respect to his occupation. While provision was thus made during 1956 to extend coverage to fishermen, the scheme did not come into operation until April 1, 1957.

### Number of persons insured

The size and composition of the population insured is constantly changing as persons enter and leave insurable employment. At the time of the annual renewal of insurance books (April 1st from

1943 to 1954, and June 1st in 1955 and 1956), contribution records are renewed through employers for those employed in insured employment at that time and for claimants on their first report to a local office after this date. These renewals and claimants together with those who entered employment for the first time during June constitute the count of the insured population presented in this report.

The usual procedure for collecting information on the insured person for statistical reports is to prepare a U.I.C. Form 699E (Sample - Book Renewal) for every insurance number ending in a "4". In 1956 a complete re-registration of all currently insured persons in Canada was carried out at the time of the annual book renewal in order to set up new files at headquarters, and at local offices of the Commission. No new insurance book was issued by local offices without the completion of a new form, U.I.C. 409 R (Employee's Registration). For insured persons with sampling numbers ending in "4" information was collected just as in previous years, but the response rate for the "4's" was higher. The collection procedure is complex because local office staff must deal with employers who contribute by stamp or meter method, with calendar and fiscal year bulk payers, with claimants reporting to the local office in the first week of June, with employees coming to the local office to renew their own books or who send their own books for renewal, and with employers in seasonal industries normally closed at book renewal periods, while head office staff deal with returns for federal insured personnel.

Estimates of the number of persons insured at other dates in the year are made by examining the number of persons insured who were employed together with those who were claimants at the time of book renewal. The numbers employed are projected forward on the basis of changes in the em-

ployment index for each of nine industry groups compiled each month by the Dominion Bureau of Statistics. To the total of the estimated employed insured there is added the number of claimants with U.I.C. Form 485 (Unemployment Register) in the "live file" of the Commission on the last working day of the month. The method is illustrated

here by the estimate for the insured population at July 1, 1956. During the calendar year 1956, the estimated insured population ranged from 3,600,000 at May 1st to 3,875,000 at December 1st. It is estimated that about two-thirds of the total civilian labour force and over four-fifths of wage earners are covered by unemployment insurance.

### Estimate of Insured Population July 1, 1956

Industry	Corpus June 1/56	Employment Index (1949 = 100) June 1/56	Base	Employment Index (1949 = 100) July 1/56	Corpus July 1/56

### Regular Unemployment Benefit

#### Definition of benefit period

When the insured unemployed worker makes his first claim, he begins or establishes a "benefit period" if he has enough contributions and satisfies the qualifying conditions. A benefit period runs for 52 weeks beginning with, and including, the week in which he established the benefit period, or until he uses up all his benefit (exhausts his benefit rights) if he does this in less than 52 weeks. If he makes a claim or claims during another period of unemployment while his benefit period is still in force, he does not have to fulfill the conditions governing the establishment again. If he has no more benefit to his credit, he must again show that he has the contributions required before a new benefit period can be established.

Coincident with the establishment of the benefit period, the claimant's weekly benefit rate and the total entitlement due him on his benefit period are calculated.

#### Requirements for benefit

The Unemployment Insurance Act was revised during 1955 (when some of the benefit periods which terminated during 1956 were established) and effective October 2nd, certain changes were made in adjusting contributions and benefit, and in changing contributions and benefit from a daily to a weekly basis. The insured unemployed worker having made a claim for benefit had to prove he was unemployed each day under the old Act and each week under the revised Act for which he claimed benefit, that he was able to work and available for work, and that he could not find a suitable job.

Under the old Act he had to satisfy the following qualifying conditions:

1. He must have at least 180 daily contributions in the two years preceding the day he made his claim; and

2. If he had no previous benefit period established in the last 52 weeks, he must have at least 60 of these contributions in the last 52 weeks or 45 in the last 26 weeks; or
3. If his last benefit period was established less than 52 weeks but more than 26 weeks ago, he must **either** have these 60 contributions since the start of that benefit period or at least 45 of them in the last 26 weeks; or
4. If his last benefit period was established less than 26 weeks ago, he must have at least 45 of the 180 daily contributions since its start.

Under the revised Act he had to satisfy in early 1956 these qualifying conditions:

1. If he had no previous benefit period, he must have at least 30 weekly contributions in the two years preceding the week in which he made his claim and 8 of those weekly contributions must have been made in the last year.
2. If this was a subsequent benefit period, he must again have the 30 and 8 weekly contributions required, but if his previous **regular** benefit period started less than a year ago, the 8 weekly contributions must have been made since the start of that benefit period; and
3. Any contribution weeks that were in the qualifying time used for the previous benefit period, **regular or seasonal**, could not be counted in the new claim if they were more than a year old.
4. Any week in which his contribution was 8 cents would count only as a half week for qualifying purposes.

The 1955 Act contains certain provisions for the continuance of claims that had their origin under the 1940 Act and for the preservation of the insured worker's rights, e.g. a benefit period in existence on October 2nd, 1955 continued in force with some modifications; and a claimant's first benefit period that became exhausted (i.e. he used up all his entitlement), if established within three years of the coming into force of the revised Act, could be extended on the basis of additional credits acquired under the 1940 Act.

Experience under the new Act indicated the necessity for two changes introduced in 1956. The first was a new interpretation of the transitional provisions of the section of the revised Act relating to conversion of daily contributions under the old Act to weekly contributions under the new Act (Section 119 (b)). Where the claimant had a record of solid employment in the period preceding the revision of the Act this section presented no difficulty, but when the claimant had broken weeks of employment he received only one week's contribution credit as the equivalent of 6 daily contributions regardless of whether the latter were earned in one,

two or more weeks. It was decided in accordance with the intent of the new Act to convert contributions under the new Act on the basis of earnings. Any week with earnings of \$9.00 or more would count as a full week and, if less, one-half contribution week. The change was announced on January 9, 1956 and made retroactive to claims filed from October 2, 1955.

The second change was an amendment to Section 45 (2) of the new Act. Certain seasonal workers had difficulty in establishing claims under the new Act which required 30 contribution weeks every year in the case of subsequent benefit periods. The claimant's difficulty was aggravated when he had had a seasonal benefit period between two claims for regular benefit. The amendment, effective September 30, 1956, applied to the claimant on a subsequent regular benefit period within two years of a previous benefit period and stated he had to have only 24 of the required 30 weeks in the last year, or since the start of the last benefit period, whichever period was longer.

On occasion, extension of the qualifying periods or antedating of the date of claim is allowed. Extension of the qualifying period can be granted where the claimant has been in non-insurable wage employment, or in business on his own account, or for such reasons as being unable to work because of sickness or injury or stoppage of work through a labour dispute when no benefit was paid. Antedated claims can be granted when good cause is shown by the claimant for delay in filing his claim.

Whether or not the claimant actually draws benefit is contingent on **other** conditions. The Act is specific with regard to certain circumstances under which a claimant is disqualified from benefit. Proof of unemployment, capacity and availability for work have been mentioned. The claimant must sign a written statement that he is unemployed, capable and available for work to obtain benefit each week at the counter of the local office on U.I.C. Form 489 (Claimant's Weekly Report) or if reporting by mail on U.I.C. Form 497 (Postal Claimant's Report). In addition, a claimant is disqualified if he has refused or failed to apply for or accept suitable employment, neglected to avail himself of an opportunity for suitable employment, or failed to carry out written directions to assist him to find suitable employment; failed to attend instruction or training courses to which he has been directed; lost his employment by his misconduct; left his employment without just cause; is a prison inmate; is a non-resident of Canada; made a false statement or misrepresentation; lost his employment because of illness, injury or quarantine; failed to meet additional conditions, seasonal regulations, married women's regulations, determination and allocation of earnings, etc.; or failed to make an application in the prescribed manner.

Claimants formerly subject to seasonal regulations (stevedoring and transportation by inland waterways), restricting benefit to period of unem-

ployment during the usual on-season were not required to meet additional conditions for benefit during the off-season for these industries because of suspension of the regulations on November 23, 1955 and cancellation on September 27, 1956.

The regulation for married women provides that a claimant must prove she acquired at least 10 weekly contributions during the period starting with the week following her marriage, if unemployed at the time of marriage. If she was employed then, the 10 weekly contributions are computed from the week following the week in which she first separates from employment. The regulation is lifted where she can prove her husband died or she is permanently separated from him, or that he is unable to work, or if her separation from employment at the time of marriage or later was other than for her misconduct or for voluntarily leaving without just cause.

Making application for benefit in the prescribed manner means a claimant must: (1) register for employment at a local office of the Commission; (2) complete an application on such forms as are required; (3) lodge or arrange to lodge his insurance book with the local office of the Commission; (4) attend at a local office or elsewhere as directed; and (5) furnish other information as required from time to time.

A claimant is required to serve a waiting period at the start of each benefit period when he establishes his benefit rights by having the requisite number of contributions and satisfies the other conditions. This waiting period is somewhat like the deductible clause in an automobile insurance policy providing for the insured being himself responsible for losses up to \$50 or \$100, as the case may be. It is expressed in terms of money, the

amount being equivalent to one full week's benefit. In effect the first full week's benefit is not paid him but applied as the waiting period. However, it is waived in respect of a regular or seasonal benefit period provided: (1) a subsequent benefit period starts **immediately** following the completion of a former, or started in the last week of the former, and (2) in the two **complete** weeks immediately prior to the completion of the former one, the total of his excess earnings (amount earned during a claim week less allowable earnings) is not greater than his benefit rate.

The provision of a waiting period does not reduce a claimant's total entitlement. It reduces his total benefit payment only if his benefit rights lapse, not if he exhausts his entitlement.

#### Contribution and benefit rates

The contribution and benefit rates under the old Act and the revised Act are shown below. The contribution rates are for the most part slightly lower under the new Act for corresponding earnings classes and more evenly graded as a percentage of average earnings. The increase in benefit rates was in line with increases in average earnings.

The rate of benefit paid the claimant under the old Act was based on the average rate of the last 180 daily contributions he made in the two years prior to his claim, and under the new Act is based on the average rate of the last 30 weekly contributions he makes in the two years prior to his claim. Thus, if the claimant had 30 weekly contributions in the last two years amounting to \$17.40 or more, his weekly benefit rate under the new Act would be \$30.00 where he had a dependent and \$23.00 if he did not, and in addition he could earn \$13.00 in casual, subsidiary or short-time earnings.

Contribution and Benefit Rates in 1955 and 1956

Weekly earnings	Employee contribution		Benefit schedule effective July 4, 1952			
			Person with dependent		Person without dependent	
	Daily	Weekly	Daily	Weekly	Daily	Weekly
	\$	\$	\$	\$	\$	\$
Effective July 3, 1950:

57.00 and over .....	.60	.58 - .60	30.00 <sup>1</sup>	23.00 <sup>1</sup>	13.00

1. Effective November 28, 1955, since a claimant required 8 weeks of contributions under the new Act before he was eligible to establish at the higher rates.

The claimant under the old Act would be considered unemployed and eligible for benefit if he was carrying on some part time job when it was an occupation which could be carried on in addition to and outside the hours of his usual employment, and when the subsidiary earnings did not exceed \$2.00 a day. However, this resulted in such anomalies as a man earning \$3.00 each day of the week and losing benefit, but another man earning as much in one or two days and losing his benefit only for those days. The provision of allowable earnings under the new Act eliminates this anomaly and others arising from the spread of the five-day work week, from short-time work and from the old Act's non-compensable day (the first day of unemployment). The insured person, with a dependent, normally entitled to weekly benefit of \$24.00 will, if he reports earnings of \$30.00, be paid for the week only \$1.00 benefit since his allowable earnings are \$7.00.

#### Duration of benefit

Under the old Act the claimant on his first benefit period could receive one day's benefit for every five daily contributions made during the previous five year period. After the first benefit per-

iod his benefit days were reckoned in the same way, but the total was reduced by one-third of the number of days for which he received benefit in the three years before he made his claim. The minimum and maximum benefit duration was 36 days (6 weeks) and 312 days (52 weeks less a week's waiting period). Cases did occur where the consideration of the benefit days paid the claimant within the three years interval before a subsequent benefit period resulted in fewer than 36 days for him or even wiped out the nominal entitlement.

The revised Act specified one week of full benefit for every two weekly contributions made in the last two years subject to a minimum of 15 weeks and a maximum of 36 weeks, except where extended on the basis of additional credits acquired under the 1940 Act by the transitional sections of the 1955 Act (See above).

Since Section 45(2) of the Act was amended regarding qualifying conditions for establishing a subsequent benefit period, an amendment to Section 48(1)(b) was made, effective September 30, 1956, which changed the minimum duration of a subsequent benefit period from 15 to 12 weeks.

### Seasonal Unemployment Benefit

#### Seasonal benefit period

Seasonal benefit is payable to claimants unable to qualify for regular benefit in respect of unemployment occurring between January 1st and the end of the week in which April 15th falls (April 21st in 1956). A claimant was able to establish seasonal benefit beginning with the week of November 27, 1955, but no benefit could be paid him prior to the week starting January 1, 1956. However, in the interval he could prove unemployment sufficient to fulfill the waiting period. A seasonal benefit claimant falls into one of two groups:

1. He must have at least 15 contribution weeks **since** the Saturday preceding the previous March 31st (Group A claimant); or
2. His most recent **regular** benefit period terminated **since** the preceding April 15th (Group B claimant).

#### Contribution and benefit rates

The weekly rate of benefit for a Group A claimant was based on the average of **all** his weekly contributions following the Saturday preceding the previous March 31st, and for a Group B claimant was the same rate as he had in the regular benefit period ended since the preceding April 15th. The schedule of benefit is the same as for regular benefit.

#### Duration of seasonal benefit

A Group A claimant with at least 15 contribution weeks after the Saturday before the previous March

31st was entitled to two weeks seasonal benefit for each three weeks he contributed, **or** the number of possible **benefit** weeks (i.e. exclusive of the waiting period) in the period from the most recent Sunday prior to the date he made his claim until April 21st, **whichever was less**. Thus a claimant could draw benefit from 1 to 10 weeks where he had 15 contribution weeks, and from 1 to 16 weeks where he had more contribution weeks.

A Group B claimant, whose previous regular benefit period ended after the preceding April 15th, was entitled to the number of possible **benefit** weeks (i.e. exclusive of the waiting period) in the period from the most recent Sunday prior to the date he made his claim to the Saturday (April 21st) of the week in which April 15th fell. Thus he could draw from 1 to 16 weeks seasonal benefit.

A claimant in the last week of 1955 with 104 contribution weeks could draw 36 weeks of regular benefit in 1956 and 16 weeks of seasonal benefit in 1957. Had he 30 contribution weeks, he could draw 15 weeks of regular benefit, and if they terminated after April 15th, 1956 he could draw a further 16 weeks of seasonal benefit in 1957 (if the 1956 rule for seasonal duration applied). If this claimant had only 15 contributions he could draw no regular benefit in 1956 but would be entitled to draw a maximum of 10 weeks of seasonal benefit in 1956.

### Comment on Tables

#### Comparison of 1956 benefit data with preceding years

The number of persons covered by insurance, establishing regular and seasonal benefit, exhausting regular benefit rights, and the estimated average duration and benefit drawn is summarized briefly for the period 1952-1956 in Table I.

The number of persons insured at book renewal date increased by some 14 per cent from 1955 to a total of 3,726,330 in 1956. The number establishing regular benefit dropped 1.8 per cent from 1955, but the number establishing seasonal benefit increased 2.3 per cent over 1955. Seasonal beneficiaries with a minimum of 15 contribution weeks increased by 80.8 per cent over the previous year, while those qualifying because their regular benefit period had terminated after the preceding April 15, decreased by 20.3 per cent. Difficulties with qualifying under Section 45(2) of the Act were responsible for many seasonal A claimants, who could not receive regular benefit.

Duration of benefit is shown in the detailed tables in terms of complete and partial weeks. The latter are weeks in which the claimant received less

than his maximum weekly benefit. In order to make comparisons of duration of benefit paid between years or between groups of claimants a partial week of benefit is assumed, on the average, to be a half-week of complete benefit. An examination of partial benefit weeks paid in the first three quarters of 1955 indicated an average of 3 benefit days. A further examination of 1956 data indicates the assumption is reasonable.

Beneficiaries who terminated regular benefit in 1956 drew benefit on the average for 11 weeks or about a half-week less than in 1955. Seasonal beneficiaries drew benefit for about 8 weeks, or about a week-and-a-half longer than in 1955.

The average regular benefit paid per period dropped from \$217.86 in 1955 to \$213.61 in 1956, a decline of 2 per cent. Although the average daily payment was up 2.9 per cent from \$3.15 to \$3.24 (\$18.90 to \$19.44 per week), the duration of benefit paid was off 4.6 per cent.

The decline in the duration and amount drawn on regular benefit was accompanied by a sharp drop in the percentage of claimants who exhausted their benefit rights. The exhaustion rate fell from 37.6

per cent in 1954 to 32.7 per cent in 1955, and to 17.2 per cent in 1956.

The average seasonal benefit paid per period increased from \$115.56 in 1955 to \$148.93, an increase of 28.9 per cent. The average daily payment increased 4.7 per cent from \$2.98 to \$3.12 (\$17.88 to \$18.96 per week) and the duration of paid benefit increased 22.9 per cent.

#### Variation of benefit data with sex of claimant

Table II shows women on regular benefit were authorized benefit for a longer period than men on the average and drew benefit for a longer period, but at a lower daily or weekly payment for a smaller amount. This is related to the fact, shown in the detailed tables, that the proportion of women in the groups which characteristically have longer periods of employment is higher than for men. Their average earnings are less than men, however.

Women on seasonal benefit who were Group A claimants on the average drew benefit for a shorter period than for men, but those who were Group B claimants drew benefit for a slightly longer period.

The percentage of women who exhausted regular benefit rights was slightly higher at 20.2 per cent than for men at 16.4 per cent.

Women as a group represented 27.0 per cent of the insured and 21.9 per cent of claimants starting regular benefit. Those completing regular benefit periods accounted for 22.1 per cent of the number, 25.9 per cent of the exhaustees, 24.4 per cent of time paid and 17.8 per cent of amount of benefit paid. They accounted for 20.1 per cent of seasonal claimants, 20.0 per cent of time paid them and 14.0 per cent of amount of benefit paid them.

#### Variation of benefit data with marital status

Table III summarizes the results shown in the detailed tables and gives the absolute and relative distributions of benefit data by marital status. Married women as a group accounted for a smaller percentage of women insured than did single women at 45.8 per cent and 49.4 per cent respectively. But married women established 58.6 per cent of regular benefit periods compared to 31.2 per cent started by single women. They comprised 55.4 per cent of regular terminations and 61.4 per cent of benefit time paid on these, compared to 34.5 per cent and 27.5 per cent respectively for single women. Further, married women accounted for almost two-thirds of women establishing seasonal benefit and time paid, while single women made up just about one-quarter of female claimants and drew some one-fifth of seasonal benefit time paid women.

#### Variation of benefit data with province

Table IV summarizes briefly results given in the detailed tables and shows the absolute and relative distributions of benefit data by provinces.

Ontario claimants, on the average, were authorized benefit for a slightly longer period than other claimants establishing regular benefit periods in 1956. Beneficiaries from Prince Edward Island, however, drew regular and seasonal benefit, on the average, for longer periods than those in other provinces. With higher daily (weekly) benefit payments, Newfoundland beneficiaries averaged a larger amount of regular and seasonal benefit than any others.

There were marked differences among provinces in the exhaustion rate for regular benefit. The rate was about 12 or 13 per cent in Ontario, Alberta and British Columbia; about 20 to 22 per cent in Nova Scotia, Quebec, Manitoba and Saskatchewan; and over 30 per cent in the other provinces. These differences reflect disparities in employment opportunities. Claimants who exhausted their regular benefit rights drew benefit on the average for about 22 weeks compared to about 11 weeks for all beneficiaries.

Ontario and Quebec claimants as a group accounted for 67.8 per cent of the insured, 64.0 per cent of those starting regular benefit and 65.1 per cent of time authorized. They accounted for 65.4 per cent of terminations, 64.3 per cent of time paid, 64.0 per cent of regular benefit paid, and 60.9 per cent of claimants who exhausted their benefit rights. These claimants accounted for 60.5 per cent of those on seasonal benefit, 59.0 per cent of time paid those, and 58.6 per cent of seasonal benefit paid.

#### Variation of benefit data with age

Table V summarizes the results shown in the detailed tables and gives the absolute and relative distributions of benefit data by age groups.

Persons 70 years of age and over, on the average, drew the highest amount of regular benefit at \$524.80, with almost 26 weeks of paid regular benefit. These persons had the highest exhaustion ratio for regular benefit periods terminated and the longest period of seasonal benefit, which is to be expected because of few opportunities for employment at this age.

Teenagers as group comprised 11.5 per cent of the insured, 6.8 per cent of those starting and 3.5 per cent of those completing regular benefit periods, one-fifth of one per cent of those with additional credits under the 1940 Act, and 4.3 per cent of persons who exhausted their benefit rights. They accounted for 2.6 per cent of time paid all beneficiaries and 3.3 per cent of time paid exhaustees, 1.8 per cent of benefit paid all beneficiaries and 2.4 per cent of benefit paid exhaustees. Since their work history and insurance contributions were limited, they were more significant as seasonal benefit claimants accounting for 9.7 per cent or almost 1 in 10 of all seasonal claimants; 18.2 per cent, or almost 1 in 5 of Group A seasonal claimants; but 4.1 per cent, or only 1 in 25 of Group B seasonal claimants. They drew 7.8 per cent of time paid seasonal claimants.

### Variation of benefit data with dependency status and weekly rate of benefit

Table VI summarizes data in detailed tables and shows the absolute and relative distributions of benefit data by dependency status and weekly rate of benefit.

Persons with a dependent, on the average, drew both regular and seasonal benefit for a longer period than claimants without dependents. For both regular and seasonal claimants those authorized the lower rates of benefit drew benefit, on the average, for a longer period than those claimants authorized higher rates of benefit. For example, the average beneficiary with a dependent who was authorized \$8.00 per week drew 16 weeks of benefit, while the average beneficiary authorized \$30.00 drew benefit for just 11 weeks.

Claimants with dependents authorized the top rate of benefit made up 17.6 per cent of those starting regular benefit, 3.5 per cent of terminations (many of which were established in 1955 at lower rates) and time paid these, 2.5 per cent of seasonal claimants and 2.3 per cent of time paid these.

Claimants without dependents authorized the top benefit rate comprised 7.7 per cent of those starting regular benefit, 1.5 per cent of termination and 1.6 per cent of time paid those, 1.8 per cent of seasonal claimants and 1.5 per cent of time paid these.

### Variation of benefit data with occupational group

Table VII summarizes data shown elsewhere for occupational groups. Persons in managerial occupations drew regular benefit, on the average, for a longer time than others terminating regular benefit. These persons are generally older with fewer opportunities for re-employment. Skilled and semi-skilled claimants as a group made up a very much higher percentage of regular beneficiaries (55.7 per cent) and a somewhat higher percentage of seasonal beneficiaries (50.8 per cent) than they did of the insured population (42.8 per cent). Unskilled and service workers as a group accounted for a somewhat higher percentage of regular beneficiaries (28.6 per cent) and a much higher percentage of seasonal beneficiaries (37.6 per cent) than they did of the insured (28.0 per cent). Many of these unskilled workers are in logging and construction industries.

### Comment on Appendices

Appendix A is an historical table showing the numbers covered by insurance from the inception of the program, the numbers starting regular and seasonal benefit, the numbers receiving regular benefit until 1949, and from that year the number of terminations of regular benefit periods.

Appendix B gives the figures of employment and unemployment for all paid workers in the civilian labour force derived from the Dominion Bureau of Statistics' labour force survey. Figures of employment and claimants are shown too for the "covered" labour force, i.e. those paid workers

### Variation of benefit data with industrial group

Table VIII summarizes the information for industrial groups. Beneficiaries on regular benefit from the public utility industry drew benefit, on the average, for a longer time than others terminating regular benefit.

Workers from basic industries, as a group, accounted for a greater percentage of regular and seasonal beneficiaries (21.2 per cent and 27.7 per cent) than of the insured (17.9 per cent). Workers from manufacturing industries represented a somewhat smaller percentage of regular beneficiaries (34.4 per cent), and an even smaller percentage of seasonal beneficiaries (24.2 per cent) than they did of insured persons (35.6 per cent). Those in all other industries accounted for somewhat less regular beneficiaries (44.4 per cent) but slightly more seasonal beneficiaries (48.1 per cent) than of insured workers (46.5 per cent).

### Distribution of benefit entitlement and payment

Tables IX and X summarize the spread between claimants in respect to amount of benefit authorized and paid. No regular benefit was paid for some 9 per cent of regular benefit periods terminated by men and some 17 per cent terminated by women. About 9 per cent of the men and 12 per cent of the women who were seasonal benefit claimants drew no benefit. About 91 per cent of regular benefit claimants and 52 per cent of seasonal benefit claimants were authorized \$200 benefit or more. However, only 43 per cent of regular benefit claimants and 33 per cent of seasonal benefit claimants drew this much benefit.

### Detailed tables

The over-all effects of sex, province, age, marital status, dependency status, weekly rate of benefit, occupation and industry on benefit data have been discussed above and are shown in the summary tables. In addition, in the relative distributions the effect of pairs of factors have been examined, e.g. age and sex. However, an examination of the detailed tables would show how average duration of benefit varies when another factor or two other factors are considered. These detailed tables show the effect, in many cases, of triplets of factors and indicate, e.g. for each age group the effect of the insured or claimant's sex and industry group.

covered by unemployment insurance, derived from the Unemployment Insurance Commission's count at insurance book renewal dates and projection of employment and counts of claimant files monthly. Differences in the levels of these measures are to be expected because of two different reporting agencies, differences in concepts and collection procedures. However, the similarity in trends is significant.

Appendix C shows the three forms of the Unemployment Insurance Commission used for this report.

1. Estimates of persons insured in 1942 are based upon 409 C's (Registration Card) received at the Dominion Bureau of Statistics between April 1, 1942 and August 31, 1942.

2. Until 1948 records were kept of persons drawing benefit and amount of benefit paid them in the calendar year. Starting with 1949, records were kept of benefit periods terminated and benefit paid on terminations.

# ANNUAL REPORT ON BENEFIT PERIODS ESTABLISHED AND TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

Calendar Year 1957

This is the sixteenth annual report on unemployment insurance benefit for Canada. The report is designed to provide comprehensive information on the personal and economic characteristics of the insured unemployed on benefit. Data is shown for all persons covered by insurance on the insured's sex, province, age, occupation and industry. For the person establishing benefit periods additional data is shown on his marital status, whether he had a dependent, his authorized weekly benefit and authorized duration of benefit. In addition, for the

person completing benefit data is given on whether benefit rights have been exhausted, and on duration and amount of benefit actually paid. The basic information was supplied by the Unemployment Insurance Commission for persons covered by insurance on U.I.C. Form 699E (Sample—Book Renewal), for persons authorized to start benefit periods on U.I.C. Form 417 (Computation of Benefit), and for persons completing benefit periods on U.I.C. Form 485 (Unemployment Register).

## The Insured Population

### Insurable employment

All persons employed in Canada in wage earning employment under a contract of service were insurable in 1956 unless specifically excepted. Exceptions broadly included those employed in agriculture; hunting and trapping; private domestic service; medical, nursing, technical and domestic staff in hospitals or charitable institutions not carried on for gain; private duty nursing; teaching; professional sport; members of the armed forces; police forces, unless insured under arrangements with the municipalities and provinces; permanent employment with the federal government or a municipal authority, except in municipal public utilities and designated federal crown corporations; employment in provincial public service, unless insured under arrangements with the individual provinces; employment paid by commission, such as insurance, real estate and securities salesmen; those paid on other than an hourly, daily or piece rate and earning more than \$4,800 a year, unless election is made to continue insurance.

Coverage was extended to any person engaged in commercial fishing effective April 1, 1957, notwithstanding that such a person was not an employee of any other person, and designated as employers of the fisherman any person with whom the fisherman entered into contractual or other commercial relationship in respect to his occupation. Fishermen were not considered for benefit until the 1957-58 seasonal benefit period, which is not covered in this report.

### Number of persons insured

The data on the insured population presented in Tables 1 to 4 are obtained from returns in connection with the renewal of insurance books and contribution cards at May 1 together with new entrants in May. Included in the figures are those who were in insurable employment at that time and whose books or cards were therefore renewed through employers, as well as those who were unemployed and

on claim whose books were renewed at their first visit to a local office after May 1. The tables are based upon a 10 p.c. sample of returns (consisting of those with insurance numbers ending in 4) and therefore the smaller numbers should be used with caution since they are likely to be affected by relatively large sampling variation.

The count of insured persons on a payroll at book renewal time in each of nine industry divisions is projected using the D.B.S. employment index for each group. The resulting figures are totalled to give an estimate of the number of insured persons "employed". The number of active claimants with an unemployment register in the "live file" of the Commission on the last working day of the month shows the number of insured persons "unemployed". These totals are added and provision is made for any change in insurance coverage when it becomes effective. During 1957 the number of persons insured (currently in contact with the Commission either as contributors or as claimants) is estimated to have ranged from a low at May 1st of 3,807,320 to a high at December 1st of 4,037,000.

Data on the insured population provide a base to which the figures on benefit periods established and terminated can be related. Table 1 which distributes insured persons by sex, age and industry is comparable with Table 21 for regular benefit periods terminated. Similarly, Table 2 lines up with Tables 10 and 20; Table 3 with Tables 12 and 19; while Table 4 is related to Tables 8, 16 and 32. At the same time the incidence of benefit periods established and terminated or benefit weeks paid derived from these tables should be used with caution. The occupations and industries recorded in Tables 1 to 3 are those in which insured persons were engaged at May 1, whereas those indicated in Tables 10, 12, 19, 20, 21, 29 and 34 relate to the last job held by each claimant at the time of claim. Thus each must be taken as an approximation to the "usual" employment characteristics of the group covered. Nevertheless, comparison of occupational,

industrial and age patterns of the insured population together with those of persons establishing benefit and benefit weeks paid show significant concentrations connected with known shifts in employment.

Information on the number of persons insured at May 1, 1957 is shown under five heads (sex, province, age, occupation and industry), and in showing the relationship between these the number of possible three-way tables is 10. Of these, four three-way tables are given.

Table 1 distributes the insured by sex, age and industry. Women comprised 26.7 p.c. of the insured. Teenagers accounted for 8.8 p.c. of the insured; those from 20 to 24 years, 15.6 p.c.; those from 25 to 44 years, 49.0 p.c.; those from 45 to 64 years, 23.5 p.c.; and those over 65 years, some 3.1 p.c. Factory workers comprised 36.8 p.c. of all employed insured. While women comprised 26.7 p.c. of all insured, they accounted for higher proportions of younger insured and lower proportions of older insured persons. The proportion of insured employed persons varied greatly from one industry to another, from a high of 65.0 p.c. in finance, insurance and real estate to a low of 0.01 per cent in quarrying, clay and sand pits. Factory employment accounted for 31.6 p.c. of employed insured teenagers and 38.5 p.c. of those in the middle aged group from 45 to 64 years.

Table 2 groups the insured by sex, province and industry. The Atlantic region accounted for 8.2 p.c. of the insured; Quebec for 26.9 p.c.; Ontario for 41.0 p.c.; the Prairies for 13.8 p.c.; and British Columbia for 10.2 p.c. Women comprised 26.7 p.c. of insured nationally but varied in importance pro-

vincially from 14.3 p.c. in Newfoundland to 28.9 p.c. in Ontario. Factory workers accounted for 36.8 p.c. of employed insured (38.4 p.c. of men and 32.2 p.c. of women) nationally but as little as 13.5 p.c. in Saskatchewan and as much as 45.0 p.c. in Quebec and 42.7 in Ontario.

Table 3 is concerned with the occupational attachment of the insured by sex and province. Managerial and professional workers comprised 4.1 p.c. of the insured; clerical and sales workers, i.e. clerical, commercial and financial occupations, 26.2 p.c.; unskilled and service workers, 25.3 p.c.; and others, skilled and semi-skilled workers, 44.4 p.c. The proportion of women insured varied from one occupation to another, from a high of 53.0 p.c. for domestic service to a low of 0.2 p.c. for mining occupations. Manufacturing and mechanical occupations accounted for 21.8 p.c. of the insured (23.2 p.c. of men and 18.2 p.c. of women) nationally but as little as 10.4 p.c. in Saskatchewan and 10.5 p.c. in Newfoundland and as much as 25.6 p.c. in Quebec and 24.9 p.c. in Ontario.

Table 4 provides an age distribution of the insured by sex and province. Among the provinces the proportion of teenagers in the insured population varied from 6.5 p.c. in British Columbia to 10.9 p.c. in Quebec; the proportion of those 20 to 24 years ranged from 13.8 p.c. in British Columbia to 18.4 p.c. in Saskatchewan; the proportion of those 25 to 44 years varied from 44.7 p.c. in Nova Scotia to 50.0 p.c. in Ontario; the proportion of those 45 to 64 years from 20.8 p.c. in Quebec to 27.4 p.c. in Nova Scotia; and the proportion over 65 from 2.1 p.c. in Newfoundland to 4.6 p.c. in Prince Edward Island.

### Regular Benefit Periods Established and Terminated

Tables 5 to 12 are concerned with regular benefit periods established and Tables 13 to 23 with regular benefit periods terminated. A benefit period is established when a claimant, having submitted his claim in the prescribed manner, proves he has fulfilled the minimum contribution requirements. The weeks authorized, weekly rate and amount of benefit authorized are then calculated and the benefit can be drawn upon during successive periods of unemployment. His benefit period terminates when either the amount of benefit authorized has been exhausted, or 12 months have elapsed since it was established, whichever comes first. Tables based on benefit periods established indicate the volume of claims from insured persons with some recent attachment to insured employment and provide information on the personal characteristics of such claimants. The tables based on benefit periods terminated provide figures on benefit paid as well as the number of cases so that the total number of weeks paid and weeks paid per claimant can be secured for any significant group.

To establish a regular benefit period in 1957, a claimant had to satisfy these conditions:

1. Where he had no previous benefit period within the two years preceding his claim, he required
  - a. 30 contribution weeks within the two years, and
  - b. 8 contribution weeks within the year prior to claim.
2. Where he had a previous benefit period within the two years preceding his claim, he required
  - a. 8 contribution weeks in the last year or since the start of his last **regular** benefit period, whichever was the **shorter** period, and
  - b. 24 contribution weeks in the last year, or since the start of the last benefit period, **regular or seasonal**, whichever was the **longer** period.

These periods could be increased by spells of sickness, non-insured employment or self-employment.

Having established his right to insurance benefit, an insured person is usually entitled to receive payment for any week during which he proved that he was unemployed, but he is disqualified from receiving benefit for every day for which he failed to prove he was (a) capable of, and available for, work;

and (b) unable to obtain suitable employment. Benefit could also be paid during periods of incapacity due to illness, injury or quarantine, if he was entitled to receive benefit at the time such illness, etc. occurred and if it was not because of the incapacity that he stopped working.

The rate of benefit paid the claimant under the Act who had paid the required premiums, i.e. passed either the 30-weeks test and 8-weeks test or the 30-weeks test, 8-weeks test and 24-weeks test, was

based on the average of his most recent 30 weekly contributions in the 104 weeks preceding the starting date of his benefit period. The contribution and benefit classes are shown below. It will be seen that if the claimant had 30 weekly contributions in the last two years amounting to \$17.40 or more, his weekly benefit rate would be \$30.00 where he had a dependent, and \$23.00 if he did not, and in addition he could earn \$13.00 in casual, subsidiary or short-time earnings.

Contribution and Benefit Rates 1957

Weekly Earnings	Employee Weekly Contributions	Benefit Schedule			
		Range of Average Weekly Contributions	Weekly Benefit		Allowable Earnings
			With Dependent	Without Dependent	
\$	\$	\$	\$	\$	\$
Under 9.00 .....	.08	Under .20	3.00	6.00	2.00
9.00 - 14.99 .....	.16	.20 - .26	12.00	9.00	3.00
15.00 - 20.99 .....	.24	.27 - .32	15.00	11.00	4.00
21.00 - 26.99 .....	.30	.33 - .38	18.00	13.00	5.00
27.00 - 32.99 .....	.36	.39 - .44	21.00	15.00	6.00
33.00 - 38.99 .....	.42	.45 - .49	24.00	17.00	7.00
39.00 - 44.99 .....	.48	.50 - .53	26.00	19.00	9.00
45.00 - 50.99 .....	.52	.54 - .57	28.00	21.00	11.00
51.00 - 56.99 .....	.56	.58 - .60	30.00	23.00	13.00
57.00 and over .....	.60				

The Act specified in 1957 one week of full benefit for every two contribution weeks made in the last two years prior to the start of the benefit period, with a maximum of 36 weeks, except where extended on the basis of additional credits acquired under the 1940 Act by the transitional sections of the 1955 Act.

The minimum duration was 15 weeks. However on a subsequent benefit period only those contribution weeks made since the previous benefit period began or that are within a year of the new claim, whichever is the longer period, could be counted, giving a maximum of 36 weeks benefit and a minimum of 12 weeks. Additional benefit could be provided in the form of seasonal benefit during the period from January 1 to April 15 of each year.

Benefit was not paid in 1957 to a claimant in the following cases:

1. At the start of the benefit period for a waiting period equivalent to a week of full benefit. This waiting period is somewhat like the deductible clause in an automobile insurance policy providing for the insured being himself responsible for losses up to \$50 or \$100, as the case may be. When one benefit period terminates and the claimant immediately re-qualifies for benefit, the waiting period could be waived. This was where in the two **complete** weeks immediately prior to the completion of the former benefit

period, the total of his excess earnings (amounts earned during a claim week less allowable earnings) was not greater than his benefit rate. The waiting period reduces the claimants' total benefit payment only if his benefit rights lapse, but not if he exhausts his entitlement.

2. For a period not over six weeks: (a) if he lost his employment by his own industrial misconduct, or if he voluntarily left it without just cause; (b) if he had, without good cause, refused or failed to apply for suitable employment or failed to accept it, or neglected to avail himself of an opportunity of such employment; (c) if he had, without good cause, failed to attend an instruction or training course under certain circumstances or failed to carry out a written direction given him by the Commission to assist him in finding suitable employment.
3. For any week in which he worked the full working week in the place where he was employed.
4. For any week in which the only unemployed days were Sunday, a recognized holiday of one day, the day before or the day after such holiday.
5. If he lost his employment by reason of a stoppage of work resulting from a labour dispute at the plant where he was employed, unless he proved he was not participating in, financing or directly interested in such labour dispute and did not

belong to a grade or class of workers who were. This disqualification lasted for the duration of the stoppage of work.

6. If he failed to prove he was unemployed, capable of and available for work, and unable to obtain suitable employment. The claimant had to sign a written statement attesting to this each week at the counter of the local office on U.I.C. Form 489 (Claimant's Weekly Report) or if reporting by mail on U.I.C. Form 497 (Postal Claimant's Report).
7. If he ceased work because of illness, injury or quarantine, he was disqualified for the duration of his incapacity or until he proved he was capable of doing some other kind of work.
8. While he was an inmate of a prison or an institution supported in part or wholly by public funds, and while he was a resident out of Canada.

Benefit paid in 1957 was reduced by earnings received when the claimant was not fully employed. Where these exceeded the amount allowed under the Act, the amount of benefit was reduced by the excess. Examples of these earnings were wages for part time work; amount received for annual plant vacations, including payments through vacation stamp; and money received at separation in consideration of returning to work for the same employer after the seasonal lay-off, as retirement leave credits, or in place of notice.

Effective November 17, 1957 special regulations applying to married women, imposing additional conditions on recently married women before they could qualify for benefit, were revoked. Before this change, a married woman who wanted to receive benefit for any week within two years following her marriage had to prove she had acquired at least 10 contribution weeks during the period starting with the week following her marriage, if she was unemployed at the time of marriage. If she had been employed at the time of her marriage, the 10 contribution weeks must have been acquired from the week following the week in which she first separated from her employment.

Information on persons establishing regular benefit in 1957 is shown under 10 heads (sex, province, marital status, age, occupational attachment, industrial attachment, dependency status, weekly rate of benefit authorized, duration authorized and number of periods). The number of possible three-way tables for showing the relationship between these factors is 120. Some of these relations are trivial and only 10 are shown in this report in six three-way tables and one four-way table.

Table 5 distributes persons establishing regular benefit by sex, province and marital status. The table shows the Atlantic region accounted for 10.9 p.c. of claimants; Quebec for 31.4 p.c.; Ontario for 34.4 p.c.; the Prairies for 11.3 p.c.; and British Columbia for 12.1 p.c. Women comprised 21.1 p.c. of claimants. Some 35 p.c. of claimants were single

and 61 p.c. were married. The proportion of women who were claimants varied from 7.0 p.c. in Newfoundland to 25.0 p.c. in Ontario and 26.1 p.c. in Manitoba. A smaller proportion of women claimants than of men were single or married and a higher proportion were widowed or separated. Among the provinces, the proportion of single claimants varied from 30.2 p.c. in Ontario to 41.4 p.c. in Quebec; the proportion of married claimants ranged from 55.3 p.c. in Quebec to 67.7 p.c. in Newfoundland; and the proportion of other cases ranged from 2.0 p.c. in Newfoundland to 5.4 p.c. in Manitoba.

Table 6 shows persons starting regular benefit by sex, province, and number of periods established. The proportion of all claimants establishing a second regular benefit period in 1957 was 1.6 p.c. (1.8 p.c. for men and 0.8 p.c. for women). The proportion of claimants with a second regular benefit period varied among provinces from a low of 0.93 in British Columbia and 0.95 p.c. in Ontario to a high of 4.4 p.c. in New Brunswick.

Table 7 is concerned with the dependency status of persons establishing regular benefit by sex and province. Some 47.3 p.c. of claimants had dependents and were authorized the higher rates of benefit (58.2 p.c. for men but only 6.8 p.c. for women). Among provinces the percentage with dependents varied from 43.9 p.c. in Manitoba to 66.8 p.c. in Newfoundland.

Table 8 provides an age distribution of persons establishing regular benefit by sex and province. Teenagers comprised 7.7 p.c. of claimants; those from 20 to 24 years, some 17.6 p.c.; those from 25 to 44, some 48.0 p.c.; the middle aged group 45 to 64 years, some 22.7 p.c.; and the older claimants 4.0 p.c. Women accounted for higher proportions of younger than of older claimants. Among the provinces, the proportion of teenagers varied from 5.2 p.c. in Alberta and British Columbia to 10.1 p.c. in Quebec; the proportion of those 20 to 24 ranged from 15.4 p.c. in British Columbia to 21.9 in Saskatchewan; the proportion of those 25 to 44 varied from 44.0 p.c. in Prince Edward Island to 49.4 p.c. in British Columbia; the proportion of those 45 to 64 ranged from 19.6 p.c. in Quebec to 26.5 p.c. in Nova Scotia; and the proportion of those over 64 from 2.6 p.c. in Newfoundland to 4.7 p.c. in Ontario.

Table 9 shows the number of regular benefit weeks authorized claimants by sex and province. The overall average was 26.6 weeks in 1957 (26.2 weeks for men and 28.4 weeks for women). Among provinces average duration ranged from 22.7 weeks in Prince Edward Island to 28.0 weeks in Ontario.

Table 10 classifies persons starting benefit by sex, province and industry. Factory workers accounted for 36.1 p.c. of claimants nationally (33.1 p.c. of men and 47.4 p.c. of women) but as little as 12.1 p.c. in Saskatchewan and as much as 47.2 p.c. in Ontario.

Table 11 is a four-way classification of persons establishing regular benefit periods by sex, dependency status, weekly rate of benefit and duration authorized. Some 47.3 p.c. of claimants had dependents (58.1 p.c. of men and 6.8 p.c. of women). Women comprised 37.3 p.c. of claimants with single benefit status and only 3.0 p.c. of claimants authorized dependency benefit. About 50 p.c., i.e. the median, of claimants were authorized 25.67 weeks (24.63 weeks for men and 30.94 weeks for women). The median rate authorized claimants starting regular benefit was over \$21 (over \$23 for men and over \$13 for women). The median rate almost \$19 for claimants authorized at single benefit rates and almost \$28 for claimants authorized dependency benefit rates. The percentage of claimants at single benefit rates authorized both maximum benefit and maximum duration was 8.2 p.c. (11.4 p.c. of men and 3.0 p.c. of women). The percentage of claimants at dependency benefit rates authorized both maximum benefit and maximum duration was 20.3 p.c. (20.8 p.c. of men and 4.3 p.c. of women).

Table 12 furnishes information on persons establishing regular benefit by sex, province and occupational attachment. Managerial and professional workers comprised 1.7 p.c. of claimants; clerical and sales workers, i.e. clerical, commercial and financial workers accounted for 13.2 p.c.; unskilled and service workers, 29.0 p.c.; and others, skilled and semi-skilled workers, 56.1 p.c. The proportion of women who established benefit periods varied from a high of 56.3 p.c. for personal service to a low of 0.2 p.c. for mining and for electric light and power workers. Manufacturing and mechanical workers accounted for 22.4 p.c. of claimants establishing benefit nationally (19.9 p.c. of men and 31.8 p.c. of women) but as little as 12.1 p.c. in Saskatchewan and as much as 47.2 p.c. in Ontario.

Table 13 classifies terminations and weeks paid by sex, age and cause of termination. The average duration for claimants who exhausted their benefit rights was 21.19 weeks. This varied by age groups from 18.68 weeks for teenagers to 28.61 for older claimants 65 years and over.

Table 14 distributes terminations, weeks paid and amount paid by sex and province. The average benefit paid per claimant was \$256.26 (\$271.59 for men and \$199.68 for women) ranging from \$221.00 in Alberta to \$356.97 in Newfoundland.

Table 15 classifies regular benefit periods terminated and weeks paid by sex, province and marital status. Benefit paid averaged 12.02 weeks (11.62 weeks for men and 13.46 weeks for women). Average duration ranged among provinces from 9.89 weeks in Alberta to 16.12 weeks in Prince Edward Island. Single claimants were paid on the average 14.53 weeks compared with 13.81 weeks for married claimants. Single women were on benefit for a shorter period, on the average, than single men; married women, however, averaged a longer period of benefit than married men. While married women claimants averaged 14.54 weeks of regular benefit nationally,

duration ranged between 11.21 weeks for Alberta married women and 18.00 weeks for Prince Edward Island married women.

Table 16 shows regular benefit periods terminated and weeks paid by sex, province and age. Average duration was 10.77 weeks for claimants 20 to 24 years and 22.44 weeks for claimants over 64 years of age. For these older claimants average duration ranged from 20.19 weeks in Newfoundland to 24.26 weeks in Manitoba.

Table 17 distributes terminations and weeks paid by sex, province and cause of termination. Average duration of regular benefit paid was 8.82 weeks for benefit periods terminated through expiry and 21.19 weeks for those terminated by exhaustion of benefit rights. However, for this latter group, average duration varied from 18.55 weeks in New Brunswick to 23.62 weeks in Ontario.

Table 18 gives terminations and weeks paid classified by sex, province, dependency status, and weekly rate of benefit authorized. Claimants with dependents averaged 11.74 weeks of paid benefit, while claimants without dependents averaged 12.29 weeks. Average duration of benefit varied by weekly rate from 9.83 weeks for \$30 benefit weekly to 16.41 weeks for \$12 weekly. While claimants drawing \$30 weekly averaged 9.83 weeks nationally, average duration ranged from 7.70 weeks in Alberta to 14.52 weeks in Newfoundland.

Table 19 groups terminations and weeks paid by sex, province and occupation. Average duration varied among occupations from 9.63 weeks for financial workers to 14.78 weeks for claimants attached to managerial occupations. Average duration for manufacturing and mechanical workers was 10.44 weeks for Canada, and varied from 8.35 weeks in Alberta to 16.36 weeks in Prince Edward Island.

Table 20 presents terminations and weeks paid by sex, province and industry. Average duration varied among industries from 7.96 weeks for workers attached to the fuels division of mining, quarrying and oil wells to 16.03 weeks for workers attached to the tobacco products industry group. While former factory workers averaged 11.18 weeks of paid benefit, the variation for factory workers by provinces was from 10.30 weeks in Alberta to 15.56 weeks in Prince Edward Island.

Table 21 shows terminations and weeks paid by sex, age and industry. Former factory workers averaged 11.18 weeks of paid benefit, varying from 9.29 weeks for teenagers to 23.22 weeks for older claimants 65 years and over.

Table 22 is concerned with a distribution of terminations by sex, weeks authorized and weeks paid. The proportion of terminations authorized 36 or more benefit weeks was 29.6 p.c. (26.2 p.c. of men, and 42.2 p.c. of women). The proportion of terminations paid 36 or more benefit weeks was 4.3 p.c. (3.2 p.c. of men and 8.3 p.c. of women). Some 11.1 p.c. of claimants drew no benefit (9.9 p.c. of men, and 15.6 p.c. of women).

Table 23 gives the number of terminations classified by sex, amount of benefit authorized and amount of benefit paid. Under the 1955 Act minimum entitlement for a person with a dependent is \$1,080. Under Section 121 of the 1955 Act certain claimants, upon exhaustion of benefit rights, are entitled to have their benefit extended on the basis of contributions under the 1940 Act. In these cases the total entitlement cannot be less than it would have been under the 1940 Act. The table shows the extent to which the amounts authorized were used. The final diagonal line of figures contains, substantially, the benefit periods terminated by exhaustion, i.e. those

in which amounts paid are equal to amounts authorized. Figures to the left of this diagonal represent, progressively, benefit periods on which the amounts paid were a smaller and smaller proportion of amounts authorized. The proportion of benefit periods terminated authorized \$1,000 or more benefit was 10.2 p.c. (12.8 p.c. of men and 0.6 p.c. of women). The proportion of terminators paid \$1,000 or more was 1.4 p.c. (1.8 p.c. of men and 0.2 p.c. of women). Some 11.1 p.c. of claimants drew no benefit. The percentages for men and women were 9.9 p.c. and 15.6 p.c.

### Seasonal Benefit Periods Established and Terminated

Tables 24 to 34 are concerned with seasonal benefit periods established which terminated in the first and second quarter of 1957. A claimant who failed to qualify for regular benefit between December 1st, 1956 and April 20th, 1957 could qualify for seasonal benefit as follows:

Group A—If he had 15 contribution weeks or more since the Saturday prior to the previous March 31st, or

Group B—If his most recent regular benefit period terminated subsequent to the previous April 15th. A claimant who failed to qualify for regular benefit was first tested for 15-weeks and only if he failed that test was he considered for Group B.

The rate of benefit paid the claimant under the Act, was based for Group A claimants on the average of all his weekly contributions subsequent to the Saturday before the 31 March concerned. The rate for Group B claimants was the same rate, subject to redetermination of dependency or single status, as the claimant had in his regular benefit period. The schedule of benefit was the same as for regular benefit.

The Act specified in the 1956-57 seasonal benefit period for Group A claimants either one benefit week for two contribution weeks, with a minimum of 10 weeks, subsequent to the Saturday before the March 31st concerned or the number of possible benefit weeks (i.e. exclusive of the waiting week) in the period from the most recent Sunday prior to the date of his claim until April 20, whichever was lesser. Thus a claimant could draw benefit from 1 to 16 weeks.

A Group B claimant was entitled to the number of possible benefit weeks (i.e. exclusive of the waiting week) in the period from the most recent Sunday prior to the date of his claim until April 20 or the number of weeks in the immediately previous benefit period (12 to 16 weeks), whichever was lesser. Thus he could draw benefit from 1 to 16 weeks.

A claimant was able to establish benefit beginning with the week of November 25, 1956 (the week in which December 1st fell) until April 20th,

1957, the end of the week in which April 15th next fell. Benefit could only be paid, however, from December 30, 1956 (the beginning of the week in which January 1st, 1957 fell). In the interval of December 1956 the claimant could prove unemployment sufficient to fulfil the waiting period required, equivalent to one week of benefit.

A claimant under this benefit formula in the last week of 1956 with 104 contribution weeks could draw 36 weeks of regular benefit in 1957 and 16 weeks of seasonal benefit in 1958. If he had 30 contribution weeks, he could draw 15 weeks of regular benefit, and if they terminated after April 15, 1957 he could draw a further 15 weeks of seasonal benefit in 1958. If this claimant had only 15 contribution weeks he could draw no regular benefit in 1957 but would be entitled to draw a minimum of 10 weeks of seasonal benefit in the first and second quarter of 1957.

Information on persons establishing seasonal benefit is shown under 12 heads (sex, province, marital status, age, occupational attachment, industrial attachment, dependency status, weekly rate of benefit authorized, class of benefit, duration authorized, amount authorized and amount paid). The number of possible three-way tables of 12 factors taken three at a time is 220. Some seven three-way tables and three four-way tables (permitting another new 11 three-way tables) are shown in this report.

Table 25 distributes persons establishing seasonal benefit, weeks paid and amount paid by sex, group and province. The table shows the Atlantic area accounted for 19.1 p.c. of claimants; Quebec for 33.4 p.c.; Ontario for 25.7 p.c.; the Prairies for 12.4 p.c.; and British Columbia for 9.4 p.c. Women comprised 21.6 p.c. of claimants. Some 69.0 p.c. of claimants established Class A seasonal benefit. The proportion of claimants who were women varied from 4.6 p.c. in Newfoundland to 31.0 p.c. in Ontario. Some 72.2 p.c. of men and 57.3 p.c. of women were Class A claimants. The proportion of Class A claimants among provinces varied from 62.5 p.c. in Ontario to 81.2 p.c. in Saskatchewan.

The overall average duration of paid benefit was 7.08 weeks (7.01 weeks for men and 7.35 weeks for women). Average duration of 6.84 weeks for

Class A claimants was shorter than 7.63 weeks for Class B claimants. Among provinces average duration ranged from 6.31 weeks in Alberta to 7.88 weeks in Prince Edward Island. The average benefit paid per claimant was \$141.86 (\$153.02 for men and \$101.42 for women). Average benefit paid at \$137.63 for Class A claimants was less than \$151.25 for Class B claimants. Among provinces, benefit per capita ranged from \$135.07 in Alberta to \$175.35 in Newfoundland.

Table 26 classifies persons establishing seasonal benefit and weeks paid by sex, group and marital status. Single claimants comprised 37.0 p.c. of all claimants; married claimants, 57.7 p.c.; and other claimants, 5.3 p.c. Class A claimants accounted for 78.8 p.c. of single persons, 63.9 p.c. of married persons, and 55.7 p.c. of other persons. Benefit weeks paid averaged 6.59 weeks for single persons, 7.31 weeks for married persons, and 8.17 weeks for other claimants.

Table 27 is concerned with the age distribution of persons establishing seasonal benefit and weeks paid them by sex and group. Teenagers comprised 12.8 p.c. of claimants; persons 20 to 24 years, 14.5 p.c.; those aged 25 to 44, some 39.0 p.c.; the middle aged group 45 to 64, some 24.8 p.c.; and older persons 65 or more, 9.0 p.c. Women accounted for only 18.7 p.c. of middle aged claimants and 5.7 p.c. for older claimants. Class A claimants comprised 89.0 p.c. of teenagers but only 39.3 p.c. of the older claimants. Average duration was 6.15 weeks for teenagers but 9.90 weeks for those claimants 65 years or more.

Table 28 presents persons establishing seasonal benefit and weeks paid by sex, group, dependency status and weekly rate of benefit authorized. Single status claimants comprised 55.9 p.c. and dependency status claimants comprised 44.1 p.c. of all persons establishing seasonal benefit. Those authorized the maximum benefit rate of \$30 weekly comprised 7.0 p.c. of all claimants. The proportion of women with single status was very high at 93.2 p.c. The proportion of Class A claimants with single status was slightly higher than for Class B. The top benefit rate accounted for 8.9 p.c. of men but only 0.2 p.c. of women, for 6.5 p.c. of Class A claimants and 3.4 p.c. of Class B claimants. Average duration of 6.95 weeks for single status claimants was less than 7.26 weeks for dependency status claimants. Average duration varied by rate of benefit authorized from 6.57 weeks for those paid \$21 weekly to 9.07 weeks for those paid \$8 weekly.

Table 29 distributes persons establishing seasonal benefit and weeks paid by sex, group and occupational attachment. Managerial and professional workers comprised 1.0 p.c. of claimants; clerical and sales workers accounted for 11.3 p.c.; unskilled and service workers, 38.7 p.c.; and others, skilled and semi-skilled workers for 49.0 p.c. The proportion of women varied from a low of 0.1 p.c. for logging workers to a high of 73.6 p.c. for com-

mercial workers. Manufacturing and mechanical workers accounted for 11.9 p.c. of all claimants (8.2 p.c. of men and 25.1 p.c. of women), but varied in importance by class of benefit for 10.0 p.c. for Class A and 16.0 p.c. for Class B claimants. Average duration varied from 6.82 weeks for logging workers to 9.21 weeks for protective service workers.

Table 30 shows persons establishing seasonal benefit by sex, amount of benefit authorized, and amount of benefit paid. Under the Act the maximum entitlement for a person with a dependent is \$480. The final diagonal line of figures contains, substantially, the benefit periods terminated by exhaustion in which amounts paid are equal to amounts authorized. Figures to the left of this diagonal represent, progressively, benefit periods on which the amounts paid were a smaller and smaller proportion of amounts authorized. Those authorized maximum benefit were 1,324 of some 209,000 claimants; 1,312 of some 164,000 men; only 12 of some 45,000 women; just 4 of some 144,000 Class A claimants; and 1,320 of some 65,000 Class B claimants. Only 908 claimants drew this much benefit. The proportion of all claimants who drew no benefit was 8.7 p.c.; of men, 8.0 p.c.; of women, 11.4 p.c.; of Class A claimants, 8.6 p.c.; and of Class B claimants, 9.0 p.c.

Table 31 classifies persons establishing seasonal benefit and weeks paid by sex, province and marital status. Average duration was 7.62 weeks for married women, but ranged from 6.34 weeks in Alberta to 8.52 weeks in Prince Edward Island.

Table 32 gives persons establishing seasonal benefit and weeks paid by sex, province and age. Among the provinces the percentage of teenagers ranged from 7.9 p.c. in Newfoundland to 15.4 p.c. in New Brunswick; those 20 to 24 years from 10.9 p.c. in British Columbia to 17.1 p.c. in Quebec; those 25 to 44 years from 34.9 p.c. in Alberta to 48.2 p.c. in Newfoundland; those 45 to 64 years from 21.7 p.c. in Quebec to 31.1 p.c. in Alberta; and those over 64 years from 3.4 p.c. in Newfoundland to 14.6 p.c. in Manitoba. Average duration paid for those claimants 65 years and over was 9.90 weeks but this varied among provinces from 8.92 weeks in Saskatchewan to 10.24 weeks in Manitoba.

Table 33 distributes persons establishing seasonal benefit by sex, dependency status, duration authorized and weekly rate authorized. About 50 p.c., i.e. the median, of the claimants were authorized 9.34 weeks (9.27 weeks for men and 9.60 weeks for women). The median rate authorized claimants establishing seasonal benefit was over \$19 (about \$21 for men and almost \$13 for women). The median rate was \$15 for claimants authorized single benefit rates and \$24 for those authorized dependency benefit rates. The percentage of persons at single benefit rates authorized both maximum benefit and maximum duration was 0.6 p.c. (0.8 p.c. of

men and 0.3 p.c. of women). The percentage at dependency benefit rates authorized both was 1.4 p.c. (1.5 p.c. of men and 0.4 p.c. of women).

Table 34 classifies persons establishing seasonal benefit and weeks paid by sex, group and industrial attachment. Factory workers accounted for 24.0 p.c. of all claimants (18.8 p.c. of men and 42.6 p.c. of women). Women made up just 1.0 p.c. of

claimants attached to general contractors in the construction industry, but as much as 65.6 p.c. of claimants attached to the communications industry. Factory workers accounted for 42.6 p.c. of Class A claimants and 38.6 p.c. of Class B claimants. While former factory workers averaged 7.17 weeks of paid benefit, those in Class A averaged 6.40 weeks and those in Class B averaged 8.44 weeks.

### Review of Unemployment Insurance Benefit in 1957

The foregoing comments on the detailed tables have been concerned with what the data for 1957 show, with particular reference to the characteristics known to distinguish the different groupings of claimants in this report, such as differences in sex, province, age, etc. Apart from this, something has been written about the requirements for establishing ordinary or seasonal benefit and about instances when benefit is not payable. Some comparison with earlier years is noted here.

The expansion in Canada's economic activity continued in 1957, but at a slower pace than in the two preceding years. The gross national product, which is a measure of the market value of all goods and services produced in Canada, rose to \$31.1 billion, an increase of \$1.1 billion from 1956 com-

pared with an increase of \$3.0 billion in the previous year. Average civilian employment increased to 135,000, but the number of persons without jobs seeking work rose to 4.3 p.c. of the civilian labour force, compared with 3.1 p.c. in 1956.

The highest unemployment among the insured labour force was reached in 1957 in March, when there were 572,400 persons on benefit or seeking benefit or 61,400 more than a year earlier in 1956. The point of lowest unemployment for 1957 was reached in July with 204,500 active claimants or 68,500 more than in July 1956. For the five years 1953-57, the highest unemployment in the first four months was recorded in 1955, for the months May to September in 1954, and for the last three months in 1957. The data on active claimants is shown below.

### Active Claimants on First of Month, 1953-1957

	1953	1954	1955	1956	1957
Number (thousands)					
January .....	303.8	451.5	479.3	388.1	398.2
February .....	376.3	556.0	586.8	476.9	546.0
March .....	288.5	558.7	619.7	511.0	572.4
April .....	262.6	379.9	605.2	511.1	558.8
May .....	239.9	378.9	353.9	292.1	292.3
June .....	164.5	293.2	144.3	268.1	250.3
July .....	142.3	244.9	186.3	136.0	204.5
August .....	134.1	228.4	167.7	138.5	205.8
September .....	134.3	222.8	152.8	132.3	208.7
October .....	142.6	214.4	145.4	128.4	226.5
November .....	184.7	236.4	163.1	139.4	268.0
December .....	283.3	306.6	219.8	215.4	403.3
Percentage of insured labour force					
January .....	9.4	13.6	13.9	10.8	10.1
February .....	11.8	16.7	17.0	13.2	13.7
March .....	12.2	16.9	17.8	13.9	14.4
April .....	8.3	11.8	17.4	13.9	14.1
May .....	7.6	11.7	10.8	8.1	7.7
June .....	5.3	9.1	4.4	7.2	6.4
July .....	4.5	7.5	5.5	3.6	5.2
August .....	4.2	7.0	4.9	3.7	5.1
September .....	4.2	6.8	4.4	3.5	5.2
October .....	4.4	6.5	4.2	3.4	5.7
November .....	5.7	7.2	4.7	3.7	6.7
December .....	8.7	9.2	6.2	5.6	10.0
Average .....	7.2	10.3	9.3	7.5	8.7

The insured labour force increased by some 6.4 p.c. from 1956 to a total of 3,974,100 in 1957. The number establishing regular benefit increased by 30.2 p.c. from 1956 (almost by a third). But the number who either were not entitled to ordinary benefit or whose ordinary benefit had been exhausted and who established seasonal benefit dropped 18.3 p.c. from the 1955-56 seasonal benefit period. This report does not consider claimants for seasonal benefit in December of 1957, but is concerned only with the seasonal benefit period 1956-57, i.e., December 1956 to April 1957.

Beneficiaries who terminated regular benefit in 1957 drew benefit on the average for 12.0 weeks, or about a week longer than in 1956. The average pay-

ment for ordinary benefit increased to \$256.26 in 1957 from \$213.61 in the previous year, an increase of 20.0 p.c. The increase in the actual duration of benefit was accompanied by a sharp rise in the number of claimants who exhausted their ordinary benefit rights—from 137,896 in 1956 to 229,952 in 1957. The exhaustion percentage rate advanced from 17.2 to 25.8 p.c.

Seasonal benefit claimants drew benefit on the average for about 7.1 weeks, or about four-fifths of a week less than in the mid-winter months of 1955-56. The average payment for seasonal benefit fell from \$148.93 in 1956 to \$141.86, a drop of 4.7 p.c. The diminution in actual duration of benefit more than offset an increase in average weekly payment from \$18.74 to \$20.02.
